

Annex A.1 – Terms of Reference

Endline Report – Step Change Window

Final Report (December 2017)

Annex A.1: GEC Evaluation Manager Terms of Reference

September 2011

Introduction

1. The Department for International Development (DFID) manages the UK's aid to poor countries and works to get rid of extreme poverty. DFID is working to reach the Millennium Development Goals (MDGs), the international targets agreed by the United Nations (UN) to halve world poverty by 2015. Progress on girls' education is critical to the achievement of these targets. Millennium Development Goals (MDGs) 2 and 3 specifically relate to education and achieving gender parity.
2. Globally 39 million primary age girls, have never been to school. And 70% of these girls come from the poorest and most marginalized communities in the most disadvantaged locations, ethnic groups etc. Over the last 20 years primary enrolments for girls have improved along with boys but completion rates are equally low for both sexes. At the secondary level the differences between boys and girls participation rates really start to show. Large disparities exist within countries with poor rural girls come off the worst in terms of educational disadvantage even at the primary level.
3. Levels of traditional ODA to education have stagnated and, given the global financial situation and shifting development priorities, may even go into decline. DFID is refocusing its efforts on girls' education through the Girls Education Challenge fund with the ambition that this will have a catalytic effect on other international partners.
4. The GEC is open to competitive bids from non-state organisations to fund programmes that focus on getting girls into primary and lower secondary education, keeping them there, and making sure they learn. It is expected that £355 million is available in total to support the GEC up to March 2015.
5. This support should enable at least 660,000 marginalised girls to complete a full six-year cycle of primary school or 1 million marginalised girls to complete three years of junior secondary school.
6. A dedicated Fund Manager will be responsible for the day-to-day operation of the GEC, including establishing the bidding process, supporting bidders, sifting and scoring proposals, evaluate Value for Money and making project funding recommendations for Board and Ministerial approval, and managing the relationship with projects to be funded.
7. The independent Evaluation Manager which these Terms of Reference relate will be contracted to establish and run a rigorous monitoring and evaluation framework to assess the effectiveness and impact of individual projects and the GEC as a whole, and disseminate lessons to inform GEC design and wider DFID programming.

Objective

8. DFID is seeking to procure the services of an independent Evaluation Manager for the Girls Education Challenge (GEC) Fund over the next four years. DFID is committed to ensuring that every girl and every boy has access to a good quality education but there is a specific need for an additional focus on girls. The Evaluation Manager will provide an independent and rigorous monitoring and evaluation function, designing and implementing a framework which will assess the effectiveness of individual projects and the GEC as a whole and disseminate good practice.
9. Full details of the GEC can be found in the Business Case on DFID's website www.dfid.org.uk

Recipient

10. The recipient of this service will be DFID.

Scope of Work and Requirements

11. The independent Evaluation Manager's primary responsibility is to track results effectively, feedback accurate assessments to the GEC Board and DFID and ensure lessons are available to inform GEC evolution and wider DFID programming.
12. The Evaluation Manager will be expected to provide a draft Monitoring and Evaluation Framework for approval by the GEC Board and DFID within the first 6 months. This inception report should contain:
 - risk management plan;
 - quality assurance plan;
 - proposed basis of work with Fund Management agent;
 - evaluation strategy;
 - outline of proposed methods for assessing core indicators;
 - outline of proposed approach to assessing grant-specific additional indicators;
 - outline of proposed approach to measuring and evaluating value for money of individual projects and cost benefit of the programme as a whole;
 - draft strategy for disseminating information to key stakeholder and partners;
 - proposed outline method for measuring educational outcomes; and
 - first draft of design of longitudinal study.
13. Once the inception report it is approved it is expected that the Evaluation Manager will be responsible for delivering the following outputs in consultation and agreement with DFID:
14. Tracking progress: ensuring robust measurements of performance at the project and programme level:
 - quality assure project progress reports, with a focus on ensuring robust tracking of performance based on agreed milestones and targets and challenging data and conclusions if necessary;
 - notifying DFID and the GEC board of progress with projects, including where problems have arisen that may require action at least twice annually; and
15. Evaluating new approaches to implementation: disseminating and presenting lessons, including cost comparisons, to inform GEC evolution and wider DFID and global programming::
 - with the Fund Manager disseminate lessons learned and report those to the GEC board to agree evolution of GEC accordingly;
 - generic lessons are drawn out on what works in girls' education, triangulated with other evidence, and reported to DFID. These lessons may be both immediate and used to inform future GEC evolution or longer term and inform future DFID or others' interventions;
 - systemic lessons are drawn out on the costs and benefits of the Challenge approach compared to other approaches including DFID bilateral aid and other DFID Challenge Fund type operations.
16. In-depth evaluations: to include working with DFID and the GEC Board to select, design and administer in depth evaluations on a select number of project interventions and thematic areas
 - the GEC Board and DFID will, following recommendations from the Evaluation Manager, select a number of projects and thematic areas for in depth evaluation. These decisions will be based on relevance to the overall objectives of the GEC, potential for wider DFID and global lesson learning and the potential to fill key knowledge gaps and feasibility and cost of collecting data. Whilst designing these evaluations the Evaluation Manager's considerations should include how to: measure the adequacy of methodologies; assess cost comparisons with relevant tried and tested interventions; combine quantitative and qualitative assessments and include a variety of methodologies including community surveys;
 - tracking whether result chains set out in the Theory of Change and logframe hold good and evidence base is sound; and
 - producing and dissemination evaluation syntheses across DFID and wider audience.
17. Design the Longitudinal study: to include draft methodology, outline core indicators, milestones and example budget:
 - Design at least one separate longitudinal study (probably to be delivered through a research institute) to follow through a cohort of girls for at least ten years to assess the longer term health and economic impact of education set out in the Theory of Change likely to require study well beyond the 4 year life of the programme. The focus of the longitudinal study will also be selected by the GEC Board after the first round of bids.

18. Supporting grantees to develop and deliver effective project M&E: working with the Fund Manager to help grantees design and manage effective M&E components which are consistent with the GEC logframe;
 - support the Fund Manager to ensure all successful proposals have written and financed within the project concrete M&E plans designed to collect systematic baseline data; consistently monitor progress against milestones and targets in the GEC log frame and a plan for conducting an end of project survey to facilitate the project completion report.
19. Disseminate and communicate information: design and administer a structure for disseminating key findings and lesson learning to key partners and stakeholders
 - Through a variety of mediums design an innovative strategy to disseminate data and engage key partners and stakeholder in lesson learning on implementation and good practice from the GEC reaches a wide audience.
 - This should include outreach and engagement with: project implementing partners; national governments; DFID country offices; bilateral and multilateral the private sector and civil society.
20. In addition the Evaluation Manager will be expected to:
 - establish a good working relationship with the Fund Manager;
 - support the Fund Manager to establish appropriate monthly reporting mechanisms;
 - support the Fund Manager to update the project logframe annually to be approved by DFID; and
 - respond to the needs of the GEC Board.
21. The Evaluation Manager should have a proven track record of:
 - monitoring and evaluation of development programmes using both quantitative and qualitative methods;
 - work with educational programmes including testing of educational outcomes;
 - social research management;
 - management of impact evaluations; and
 - undertaking evaluations in the context of major donor interventions, ideally focused outside of government

Constraints and Dependencies

22. The GEC will support projects to be implemented in 10 of the 27 countries in which DFID operates. The Evaluation Manager will be expected to provide their own overseas duty of care and logistical arrangements. If deemed necessary DFID may need to be convinced that systems and procedures that they have in place are adequate if traveling to conflict affected countries.

Reporting and Monitoring and Evaluation

23. Key Performance Indicators (KPIs) will be agreed between DFID and the successful bidder during the post-tender clarification stage and before formal contracting. These will ensure that the management of the contract is undertaken as transparently as possible and to ensure that there is clarity of roles and responsibilities between the DFID Internal Team and the Evaluation Manager.
24. The GEC Board will evaluate the performance of the Evaluation Manager throughout the life of the programme and at least twice yearly one of which will be as part of DFID standard Annual Review of the programme. The Evaluation Manager will be expected to submit progress reports and lessons presented written and orally to the GEC Board to DFID twice annually in line with DFID's programme cycle as outlined in the requirements section of this ToR. It is expected that the Evaluation Manager take a proactive approach to notifying DFID of any matters which may require immediate attention.
25. The inception report should be finalized within the first 6 months as detailed in the scope of work and requirements section. The inception report should outline details of timelines for in-depth evaluations and the longitudinal study milestones. Comprehensive progress and evaluation report in spring 2014 to inform possible future support for the GEC. The final evaluation report by February 2015.

Timeframe

26. The contract for the Evaluation Manager will be awarded from February 2012 – March 2016. The contract is designed to end one year after financing is dispersed to allow a final evaluation of projects to be completed if necessary.
27. The final selection of the Evaluation Manager following the short listing will be undertaken through a presentation for each bid. Therefore it will be critical that the relevant personnel will be available for this. These will be scheduled week commencing 12th December 2011.
28. The Girls Education Challenge fund will run for 4 years initially (2011 – 2015) with the possibility of a further extension. Although no project financing is committed beyond 2015 the Evaluation Manager should consider establishing monitoring and evaluation systems in terms of measuring the long-term sustainable benefits of the GEC benefits beyond the life of the programme.
29. The first Step Change Projects will be awarded in spring 2012 and Strategic Partnerships will be asked to express further interest around the same time. Initial Innovative projects are likely to be awarded in January 2013. All projects proposals will be approved at board level, following recommendations by the Fund Manager, with final sign off required by the Secretary of State for International Development.
30. The Evaluation Manager will be expected to play a significant role supporting the Fund Manager to arrange an event to be held in early 2015 at which the GEC projects will be able to demonstrate the results of their investments to the GEC Board and a panel of potential funders (including private sector foundations).

DFID coordination and management

31. A GEC board will be established – chaired by a prominent development specialist - to provide leadership to the GEC. The board will consist of individuals representing the private sector and the non-governmental sector and include specific expertise in education, evaluation and finance. The DFID GEC team will act as a secretariat to the board.
32. The Evaluation Manager will report directly to the Board. Operating independently from the Fund Manager the Evaluation Manager will provide reports to an agreed timetable to the Board, liaising with the DFID EvD Team as appropriate.
33. The DFID GEC team (consisting of the Senior Education Advisor and Policy and Programme Manager) will have the day-to-day oversight and management of the Evaluation Manager. The DFID EvD Team will also have an oversight role of the GEC Evaluation Manager, providing strategic advice as required and ensuring that evaluation and monitoring activity aligns with wider DFID activity.
34. The DFID GEC team will monitor operational and financial progress on an ongoing basis and raise any issue that require attention to the chair of the GEC Board and DFID senior management and Ministers as necessary.

The Evaluation Manager will be expected to report to the board twice annually alongside the Fund Manager who will be expected to present funding recommendations along with progress and decision points to the board. The board will then submit their view on this information to the Secretary of State for International Development for his final approval before any financing is awarded or any significant changes are made to the fund.

Final Report (December 2017)

Annex B – Project Profiles and Intervention Planning

Aga Khan Foundation – Afghanistan

Steps Towards Afghan Girls’ Education Stages (STAGES)

Pre-school, Primary, Lower Secondary | **24, 165 girls** | **£28,030,000**

Provinces: Badakhshan, Baghlan, Balkh, Bamyán, Faryab, Ghor, Herat, Kabul, Kapisa, Kandahar, Khost, Paktia and Parwan.

STAGES operates across 14 provinces of Afghanistan. The project has established community-based primary, lower secondary and accelerated learning classes in communities where there is no government school. The implementation of these classes is complemented by a range of additional interventions, including: training of teachers and school management councils, renovation of classrooms and provision of school equipment, facilities, infrastructure and learning resources.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

ACTED Afghanistan

Increasing the Access and Quality of Basic Education for Marginalised Girls in Faryab

Primary | **9,432 girls** | **£44,790.61**

Overview of the Project

The project “Increasing the Access and Quality of Basic Education for Marginalized Girls in Faryab” operates in Faryab province in Afghanistan. The project aims to construct primary schools and Youth Development Centres (YDCs) and hold village literacy courses across the province. It also hires professional female teachers for the YDCs, conducts teacher trainings and provides vocational training to increase female economic empowerment.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

CfBT (now called EDT) – Kenya

Wasichana Wote Wasome (WWW – Let All Girls Read)

Primary | **136,000 girls** | **£13,510,921**

Provinces: Arid/Semi-Arid Lands: Turkana, Samburu, Marsabit, Tana River, Kwale, Kilifi. Urban slums: Nairobi, Mombasa.

Overview of the Project

The project works in primary schools in two contexts: Arid and Semi-Arid Lands (ASALs) and urban slums. It drives changes at four different levels: the community, the home, the school and the girl herself. At the community level, the project is running community conversations, engaging with men and boys on girls’ right to education, and mobilising community support and funds for girls’ education. At household level it provides cash transfers; back to school kits; visits by community health workers; and tailored support for marginalised girls to (re)enrol. At the school level, it coaches teachers in reading and gender-sensitive pedagogy; and works with schools to enhance gender equality, adolescent health, school infrastructure and girl-friendliness. At the individual level, the project is providing girls’, boys’ and special health clubs, role models and deworming and vitamin supplements.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

ChildHope – Ethiopia

Securing Access and Retention into Good Quality Transformative Education

Primary & Secondary | **16,503 girls** | **£2,313,518**

Provinces: Amhara (South Gondar, South Wollo), Oromiya (Arsi)

Overview of the Project

At individual girl level, the project focuses on delivering individualised academic and life skills to all target girls (e.g. providing books, uniforms, and tutorials). At school level, it focuses on creating safer, stimulating and less discriminatory environments (e.g. by training teachers, supporting girls with disability, placing letter-link boxes for children to report abuse, building toilets, establishing girls’ reading corners and clubs for girls and boys). At family and community level, the focus is on increasing knowledge and skills to support marginalised girls’ education (e.g. conducting community conversations, providing income grants to families and supporting stakeholders’ committees to better coordinate on girl’s education and child protection issues).

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

IRC – DRC

Valorisation de la Scolarisation de la Fille (VAS-Y Fille!)

Primary | 109,577 girls | £22,131,437

Provinces: Bandundu, Equateur, Kasai Orientale, Katanga, Province Orientale

Overview of the Project

The VAS-Y Fille! (VYF) project is implemented in 400 schools, covering five provinces in DRC where girls have particularly low enrolment, retention and attendance rates. VAS-Y Fille! awards need-based scholarships and vouchers to selected girls in intervention schools, and invites parents to join savings and loan associations. The project provides training packages to selected teachers, covering literacy, numeracy and gender-sensitive pedagogy. It also offers after-school tutoring for low-performing students; runs community mobilisation campaigns around girls' education; supports PTAs in making schools more girl-friendly, and supports CSOs providing non-formal accelerated learning programmes (ALP) to boys and girls who are out of school.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related
								

Plan – Sierra Leone

Education in Emergencies – Ebola Response Year

Education Focus: Lower Primary, Upper Primary, Lower Secondary

Lead Organisation: Plan International

Country: Sierra Leone. **Provinces:** Port Loko, Moyamba, Kono, Kenema and Kailahun

GEC Funding: Not Available

Target Reach: 21,600

Overview of the Project

The Ebola Response year programme was designed to provide ongoing assistance to GEC participants during the Ebola outbreak in Sierra Leone, and supported the government response and needs of the target group. The programme ran between Jan 2015 until December 2015. Activities included support of the Ministry of Education, Science, and Technology (MEST) in the five target districts, providing weekend repeat broadcasts of the weekly MEST radio education programme, and study groups. The consortium also provided training to learning assistants and training in Sexual Reproductive Health and Rights (SRHR) to teachers, with the aim of creating a more girl-friendly school environment. Parents' Advocacy Clubs were also formed, with the aim of mobilising parents to advocate for girls' education in their communities. There was a focus on reaching girls with a disability with the activities carried out by Handicap International.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Marginalisation related

Save the Children (5098) – Ethiopia

Pastoralist Afar Girls’ Education Support Projects (PAGES)

Primary | **12,479 girls** | **£9,000,465**

Provinces: Afar (Mille, Ada’ar, Chifra, Dewe, Hadelela, Semurobi, Gewane and Buremudaytu)

Overview of the Project

PAGES operates in the Afar region in the north-east of Ethiopia. The project aims to help improve girls' life chances by strengthening their right and access to education. The project focuses on primary education (Grades 1-3 and Alternative Basic Education levels 1-3, and out-of-school girls), using interventions at the individual, community, school and policy level to address the many barriers faced by girls across Afar.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

WUSC – Kenya

Kenya Equity in Education Project (KEEP)

Upper primary & lower secondary | **25,867 girls** | **£14,737,043**

Provinces: Kakuma and Dadaab refugee camps; host communities in Turkana West (Turkana County), Dadaab, Fafi and Wajir South (Garissa County)

Overview of the Project

KEEP’s principal entry point is through 89 target schools in Kakuma and Dadaab refugee camps and their host communities in Turkana West, Dadaab, Fafi and Wajir South districts of Kenya. KEEP provides infrastructure, material and human resources to these schools in varying levels, dependent upon need, as well as learning supports and motivational materials to deserving and particularly marginalized girls attending these schools. The project promotes and strengthens girls’ and boys’ clubs, School Management Committees (SMC) and Parent Teacher Associations (PTA) in these schools. It provides resources to work with community leaders and opinion makers, and coordinates efforts with other relevant actors.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

BRAC – Afghanistan

Community Based Education for Marginalised Girls in Afghanistan

Primary & Secondary | **50,100 girls** | **£14,468,601**

Provinces: Baghlan, Balkh, Herat, Kabul, Kapisa, Kunduz, Nangarhar, Parwan, Jawzjan and Samangan

Overview of the Project

The project aimed to enrol and retain out-of-school girls by establishing community-based girls’ schools and maintaining enrolment of girls in government schools at risk of dropping out. The project is training older girls as teachers and peer mentors, as well as providing stationery and stipends and organising Mother’s Meetings to discuss issues and attitudes towards girls’ education. Student Organisers ensure girls’ safe transportation and attendance at community based schools. BRAC is also providing in-service training to government school teachers and hub school workshops to support existing government schools.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

Camfed – Tanzania and Zimbabwe

A New “Equilibrium” for Girls

Lower secondary | **53,641 (T) & 118,000 (Z)** | **£23,716,751**

Provinces: Tanzania Provinces: Iringa, Morogoro, Pwani, Tanga. Zimbabwe Provinces: Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Mataberland North, Mataberland South, Midlands.

Overview of the Project

A New Equilibrium for Girls operates in 10 rural districts in Tanzania and 24 rural districts in Zimbabwe. The project has provided financial support combined with targeted local initiatives to tackle obstacles to girls’ retention and ensure a supportive educational environment. Activities have included: developing and distributing low-cost, self-directed study guides in core curriculum subjects to support academic learning, as well as a broader life skills curriculum. The project has also recruited young women school leavers to play a role as Learner Guides, supporting children in their local schools while gaining status and opportunities. The project has reinforced existing local government and community structures to respond to the needs of marginalised girls, and with the aim of influencing policy. This project has pioneered the use of mobile technology to capture real-time data about girls, their schools and communities; and engaged with national education partners to develop and review the approach under the GEC, as well as identify opportunities for key lessons and practices to be adopted.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

CARE – Somalia

Girls Education Promotion Project (SOMGEP)

Primary & Secondary | **10,145 girls** | **£11,471,268**

Provinces: Togdheer, Sool, Sanaag, Mudug, Ayn and Galmudug

Overview of the Project

The project seeks to mobilise about 170 rural communities to support girls’ education. This will entail in-service training and support of teachers and pre-service recruitment and training of teacher candidates (30% female) to provide relevant, quality education for primary and secondary school rural girls. The project plans to construct or refurbish schools, so as to provide culturally appropriate, child/girl-friendly learning facilities in 150 rural primary schools and 20 secondary schools, as well as to build boarding facilities in two secondary schools for rural girls.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

Relief International – Somalia

Educate Girls, End Poverty

Primary & Secondary | **48,447 girls** | **£9,925,005**

Provinces: Somaliland, Puntland, and South Central

Overview of the Project

The purpose of the project is to enrol more girls in school, inspire them to stay in school, and make sure they graduate school with knowledge that enables them to break the cycle of poverty. The project works within primary, secondary, vocational, and non-traditional schools, and family life education centres¹.

To tackle demand-side barriers, the project is running the following activities: awareness-raising and behavioural change activities, such as media messaging, community dialogues, and door-to-door recruitment campaigns to promote the importance of girls’ education; providing bursaries to the most marginalised girls; training teacher mentors to provide psycho-social support, sanitary kits and menstrual hygiene advice to girls; and distributing a Safety Net Fund at the school level, providing items such as school uniforms, shoes, bags, and exam fees to girls at risk of dropping out.

¹ Project proposal

To improve education on the supply side, the project is improving classroom and school facilities; distributing supplies and learning materials; providing a two-year in-service training for female teachers; launching a travelling library; and is piloting a feeding programme in selected schools. The project is also building capacity of MoE officials in all three zones; training Community Education Committees (CEC) in school management, child protection, and approaches for getting out-of-school girls into school; and establishing girls' clubs. They are also bringing diaspora Somali women to join project schools as interns, to work with girls in clubs and fundraise after they return home.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

Save the Children – Mozambique

Promoting Advancement of Girls' Education in Mozambique (PAGE-M)

Lower & Upper Primary | **38,752 girls** | **£6,731,942**

Provinces: Gaza, Manica and Tete provinces (ten districts within these provinces)

Overview of the Project

PAGE-M operates in three provinces and ten districts in Mozambique. It provides school kits for the most marginalised girls, bursaries for secondary school girls, and runs community sensitisation events and community radio programmes about girls' education. It supports the creation of women's clubs that promote retention of girls, follow-up on violations of girls' rights and individual cases of school-drop out. It runs girls' clubs to strengthen girls' confidence and knowledge of their rights, and trains club members as peer educators to help other girls with educational or social challenges. The project also promotes the establishment of safe school committees, and is piloting a complaint response mechanism for children. Finally, the project applies a literacy and numeracy boost methodology to existing in-service trainings.

Economic	Teacher training	Infrastructure	Community-based	Extracurricular & non-formal education	School management & governance	Empowerment & self-esteem	Marginalisation related	Violence related

World Vision – Zimbabwe

Improving Girls' Access through Transforming Education (IGATE)

Primary & lower secondary | **60,967 girls** | **£11,940,168**

Provinces: 10 Districts: Beitbridge, Binga, Chivi, Gokwe North, Gowke South, Insiza, Lupane, Mberengwa, Mangwe, Nkayi

Overview of the Project

The project is providing village savings and loans to raise money for girls' school fees and cost of education; running trainings for mothers' groups on how to mentor and guide girls and other parents on education, gender-based violence, and menstrual hygiene; organising school-based girls' clubs run by female teachers to build girls' leadership skills and their understanding of their rights; training school officials involved in School Development Committees on business and management skills, and on how to create and foster gender-friendly environments; training communities in the use of an educational score card to assess school quality, develop action plans, and lobby for improvements; providing bicycles to students that have to cover long distances; engaging faith leaders and male champions to promote girls' education; and training teachers to develop students' reading skills.

Endline Report – Step Change Window

Final Report (December 2017)

Annex C – Other Girls' Education Programmes

Table 1: Overview of other girls' education programme and how they compare with the GEC

Programme Name	Description	Key differences
UNICEF's Girls Education Portfolio	Improving Basic Education and Gender Equality is one of the primary targets of UNICEF's Medium Term Strategic Plan. Through upstream initiatives UNICEF sets out to support positive changes in education-related policy and budgeting. Downstream initiatives constitute project service delivery.	UNICEF operates upstream through government partnership, collaboration, and advisory services and downstream through direct project implementation, whereas the GEC exclusively funds NGOs to implement projects downstream.
Global Partnership for Education (GPE)	The GPE is a partnership between donors, developing countries and civil society with the aim of ensuring that any low-income country with a credible education sector plan has an opportunity to finance this plan. The GPE has disbursed over \$1 billion to 37 countries in support of their education sector plans, and has provided policy support to 46 countries in total to develop sound sector education plans. GPE aims to advance gender equality in education by strengthening partners' sector planning and policy implementation, supporting inclusive policy dialogue and providing effective financing for the implementation of sector plans (Policy Brief, October 2016).	GPE fills a critical gap in the aid architecture as the only significant multilateral pooled funding mechanism in education, and the only global agency which focuses solely on education. GPE funds both state and non-state projects, whereas the GEC funds only NGOs or private sector partners.
USAID's Let Girls Learn Fund	USAID's Let Girls Learn Fund brings together a range of institutions, agencies and programmes ² to address the range of challenges preventing adolescent girls from attaining a quality education. USAID's Let Girls Learn approach is comprised of three main pillars: Increasing Access to Quality Education, Reducing Barriers, and Empowering Adolescent Girls.	The Let Girls Learn Fund extends beyond the GEC in that it focuses on increasing girls' rights, leadership and opportunity through broader skills training. For example, Let Girls Learn is partnering with DFID and Nike to fund the SPRING programme, which aims to empower girls at the bottom of the pyramid by providing products and services that can change their lives.
Country-focused DFID programming³, e.g. The Keeping Girls in School (KGIS) programme in Malawi	The KGIS Programme in Malawi is a £33m programme that involves a range of interventions components implemented by specific service providers. They focus on bursary provision, water and sanitation, technical assistance, training female teacher assistants, building teacher training colleges, cash transfers, improving the school experience, and advocacy. KGIS is not a national programme, and interventions for some components are being implemented in different districts. All components are targeted at improving participation and retention in education for girls. However, key target groups vary.	The KGIS is led by one overarching Theory of Change, in which each component is nested. In the GEC, in contrast, projects were invited to submit their own Theories of Change to support their initiatives. KGIS is governed directly by DFID who coordinate the operation and collaboration of the various interventions. Each service provider focuses on one (or two) areas of intervention, each tackling specific barriers to education. In the GEC SCW most projects aim to address a variety of barriers through a range of different intervention types, and are not coordinated within a same country.

² These include, for instance, the Department of State, the U.S. Agency for International Development (USAID), the Peace Corps, and the Millennium Challenge Corporation (MCC), as well as other agencies and programs like the U.S. President's Emergency Fund for AIDS Relief (PEPFAR).

³ Other examples of country-focused DFID programming can be found here: <https://devtracker.dfid.gov.uk/sector/1/projects>

Endline Report – Step Change Window

Final Report (December 2017)

Annex E – Methodological Notes

1 Evaluation Manager Data

Overview

As the GEC Evaluation Manager, we collect three waves of quantitative and qualitative data across nine countries. The endline fieldwork was managed and led by our consortium partner ORB International, and delivered by local research partners in each country. In this section, we outline our approach to sampling, training interviewers, collecting data, and processing data. It also provides details on quality control procedures.

The information contained within this section covers the quantitative methodology for the EM Household Survey (HHS) and School-Visit Survey (SVS) conducted through a combined total of 6,279 personal face-to-face interviews in Kenya, Tanzania, Mozambique, the Democratic Republic of the Congo (DRC), Zimbabwe, Ethiopia, Afghanistan, Sierra Leone and Somalia between November 2016 and April 2017.

1.1 Research permissions process

To obtain research permissions, we used standard country-specific protocols in most countries. In many countries, this means obtaining permission from the National Bureau of Statistics as we would normally do when running a typical household survey. Due to the nature of the research for GEC, we also needed to obtain permission from the various Ministries of Education. In most countries, the permissions process was straightforward and did not cause any problems. However, we did encounter difficulty in a few select cases. Please see below for a summary of the permissions process in each country.

Kenya

Our local partner already has permission to conduct surveys in all regions of Kenya from the National Commission for Science, Technology and Innovation (NACOSTI). However, due to the nature of the study (which involves surveying girls under 18, visiting schools and visiting refugee camps), further permission steps were taken to gain approval from the following groups/individuals:

- Permission from all County Commissioners in the counties where fieldwork took place
- The Institute of Refugee Affairs [IRA] headquarters: they manage both Kakuma refugee camp and Daadab refugee camps
- UNHCR in Nairobi [HQ]
- Education Secretary in Nairobi
- All County Directors of Education in all counties of fieldwork
- Windle Trust Kenya

All permission was granted prior to fieldwork commencing.

Mozambique

As at midline, our local partner sought permission from individual schools ahead of their visits during fieldwork. All permission letters were kept on file.

Tanzania

Our local partner in Tanzania managed the research permissions process. Since fieldwork in Tanzania did not include a school component, we did not need to obtain any special permission to work in schools.

DRC

In DRC, our local partner obtained general research permission from the Ministry of Education.

Zimbabwe

In Zimbabwe, our local partner, with support from Coffey and DFID, obtained research permission at the national level from the Ministry of Primary and Secondary Education. As part of the permission to work process, The

Ministry of Primary and Secondary Education (MOPSE) indicated that each team should have a member of their personnel on it. The MOPSE personnel who participated in the midline survey all participated in this endline survey

Ethiopia

Our local partner obtained federal permission from the ministry of education, before being granted regional permission in each of the three regions. ORB and Coffey assisted in this process, providing all of the relevant supporting documentation.

Somalia

Our local partner, with support from the implementing projects, obtained survey permission for all regions included in the survey: Somaliland, Puntland, Galmudug, and South Central.

Afghanistan

Our local partner maintains general survey permission, allowing them to conduct household interviews in all provinces. Because we did not need to work in schools, no additional permission was needed.

Sierra Leone

Our local partner maintains permission to conduct general surveying in Sierra Leone. Due to the issues which arose while attempting to obtain permission from the Ministry of Education, Science and Technology to conduct research in schools at midline, no attempt was made to obtain permissions at Endline. As at midline, the school surveys therefore did not take place at endline.

Survey sampling

1.1.1 Sampling for the household survey

To complete the quantitative household sample, teams in each country attempted to re-contact the randomly selected households surveyed at midline. If the midline household could not be located, it was substituted using a pre-determined pattern. At each household, teams completed three-part surveys with an adult first informant, girl aged 8-18⁴, and the primary caregiver for the selected girl. Only surveys that included all three of these parts were included in the final sample.

Sample universe

The sample universe consisted of the list of project intervention and control locations supplied to the EM by the SCW projects before baseline. The EM received these lists between April 2013 and September 2013, with some modifications and revisions thereafter. Additional lists of locations arising from boosts carried out in the light of baseline research were not included. The locations consisted generally of villages or demarcated zones within a town or city. In some instances, the locations were defined only in terms of schools, in which case the sample location was defined as the catchment area of the school. Camfed did not provide a community-based listing as its intervention population was located within schools. The EM asked for a listing of the home communities of girls due to receive bursaries through the project intervention and used this as a sampling frame. In these communities, a mixture of randomly selected households and purposive sampling of girls who resembled (and included) the target population in terms of receiving bursaries was used.

Sample preparation

The projects supplied sampling frames based on a template developed by the EM. In most cases, these were not fully completed as information about issues such as geo-locations or the local population size was often missing. Some projects supplied separate sampling frames for school and community interventions, which required additional processing to integrate into clusters for randomisation and subsequent sampling where appropriate. Samples for some contexts such as refugee camps were indicative and a full listing of sub locations was developed from available information such as maps. Some projects provided separate listings for activities to be carried out by partner NGOs and these were treated as extensions of the list and sampled accordingly.

⁴ The samples in Tanzania and in parts of Zimbabwe included girls aged 15-19 (general) and girls aged 15-19 who had received a bursary.

Table 4 shows the division of responsibilities between SCW projects and EM in developing the samples.

Table 4: Responsibilities in developing a joint sampling framework for the SCW household surveys

Project responsibilities	EM responsibilities
<ul style="list-style-type: none"> • Divide intervention areas into smaller districts of operation and create a community-level sampling frame for each district, consisting of a list of settlements or urban areas. • Stratify districts into intervention and control areas. • Propose a protocol for sampling a representative selection of households (or the nearest equivalent) within the sampling point, including, where appropriate screening and oversampling. • Propose a sample size that will provide estimates of intervention effects on girls with a level of statistical precision that is proportionate to the targets for attributable change in key outcomes set by the project. • Account for relevant characteristics of the population, such as the anticipated variation between localities. • The sample must be representative of the overall target population. 	<ul style="list-style-type: none"> • Quality-assure the community-level sampling frames, sampling protocols and sample sizes proposed by the projects. • Draw an appropriate sample of sampling points from the sampling frames across relevant intervention and control areas. • Divide the selected sample of sampling points randomly (but not in equal proportions) between the EM and the projects for the implementation of the surveys.

Sample design

The design of the sample involved a selection of 40 locations per project area within each of which 10 households would be selected and surveyed giving a target sample of 400 interviews per project. The sampling points selected were not clustered geographically and the 40 points were often widespread geographically. In this way the GEC sample as a whole is representative of the underlying GEC populations albeit on the basis of giving equal weight to each project context. Half of the sampling points were assigned to intervention locations and half to control locations. Where intervention and control locations were randomised, sampling from them was carried out in a systematic manner so as to provide control locations that were representative of the whole. In some projects control locations were identified by the project on an ad hoc or informal matching basis and in relatively small numbers. In these cases, the control samples were selected around the requirements of the project. In a small number of project contexts, there were fewer than twenty control locations available for sampling and the number of interviews per location was increased accordingly.

Sample selection procedure

We typically drew the sample using a fixed interval and random starting point across the list of locations that we had been provided. Intervention and control locations were treated as distinct listings. This approach gives a reasonably proportional sample by region and district relative to the number of project locations and an appropriate geographical spread. We pre-sorted districts within regions or sampling points within districts where this appeared advantageous. Population information was not generally available for each location so we used selection based on equal probabilities as our default approach.

With the exception of Camfed (Tanzania and Zimbabwe), the sample selection for the EM data collection used the same sampling frame as that used for drawing the project sample. Where appropriate (i.e. where populations where relatively small) the two samples were drawn together to reduce overlap and maximise overall coverage. For larger population lists the two samples were drawn independently. In some instances, projects gave specific instructions for their sample such as selecting locations with probability proportional to size, and in some instances sample selection was combined with the randomisation of intervention and control status.

ORB conducted all fieldwork face-to-face, using local, trained interviewers who were familiar with the territory. [Table 5](#) lists the final allocation of interviews for each country at midline.

Table 5: Required and achieved EM household survey samples per SCW country

Country	Sample required	Sample achieved at midline
Kenya	800	865 ⁵
Mozambique	400	433
Tanzania	200	215
DRC	400	438
Zimbabwe	826	1076
Ethiopia	800	802
Somalia	800	821
Afghanistan	1200	1200
Sierra Leone	400	429
Total	4226	6279

Household and Respondent Selection – Recontacted Clusters

Stage 1: Re-contact sample development. Each team was given a sample developed from the delivered midline data that included: household identification number (HHID), geographic location (cluster, district, and region names), name of the surveyed girl, name of the girl's caregiver, name of the head of household, and name of the girl's school, if she was enrolled at midline.

Stage 2: Meet with local administrators. Upon arrival in a new sampling point, teams first met with the local administrator/area chief to discuss the purpose of the survey and receive permission to continue. During this meeting, they review the list of midline households to confirm addresses/locations/contact details if the family is still in the area. If the family has moved and the local administrator knows where they have moved to, the team supervisor records this information as well.

Stage 3: Locate midline household. If the local administrator could not confirm the family's location, the team used cover sheets completed during midline to attempt to find the household.⁶ If the family was not found in the location denoted on the cover sheet, the team asked a neighbour if the family still lives in the household. If the neighbour could not confirm the family's location, the team attempted to contact the family contact details recorded at midline (mobile phone numbers for themselves and close friends). All attempts to locate the midline household were recorded by the supervisor. If the midline household could be located but no one was home when the interviewer first called at the house, the interviewer made up to three call-backs to attempt to contact the original family. If the midline household was successfully contacted, interviewers proceeded with the recontact interview.

Stage 3a: Locate midline girl. After locating the midline household, interviewers asked a series of eight questions to determine if the girl surveyed at midline was still a part of the household.

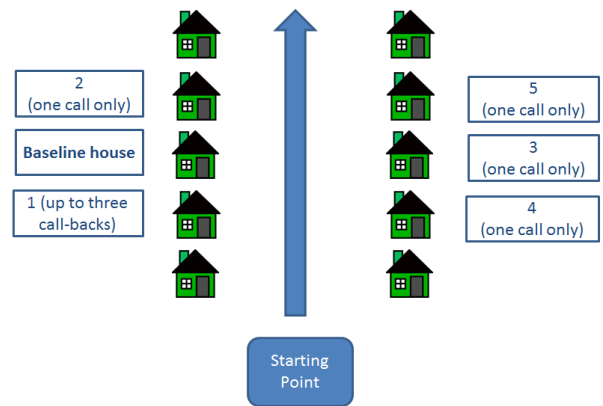

Stage 3b: Substitute midline girl with another girl from the same household. If the midline household could be located but the girl surveyed at midline could not or if she was no longer eligible to participate because she was now married, interviewers substituted with another girl aged 8-18 in the same household, if another girl was available. This case was coded as a recontact interview.

⁵ In many cases, the achieved sample is larger than the required sample due to a quality control oversampling implemented at the cluster level.

⁶ Preference was placed on tracking the **girl** surveyed at midline. Thus, if the household moved but the girl remained in the village, teams surveyed her and her new caregiver instead of substituting.

Stage 4: Substitute household (if midline household could not be located or if midline family could not be contacted or refused). In some cases, interviewers were unable to locate the family surveyed at midline. If the local team needed to substitute a household, they completed the following walk pattern until finding a successful substitute:

- Call at the house immediately before the midline house in the direction of the starting point. Make up to three call-backs before continuing to the next house in the walk pattern.
- If there is no eligible girl (i.e. aged 8-19) living in the household; if it is a child-headed household; or if for any other reason the interviewer cannot complete an interview at this house then he or she will call at the house immediately *after* the midline house in the direction away from the starting point. Interviewers made only one call at this and all subsequent houses in the substitute walk pattern.
- If there is no eligible girl (i.e. aged 8-19) living in the household; if it is a child-headed household; or if for any other reason the interviewer cannot complete an interview at this house then he or she will call at the house immediately opposite the original house on the other side of the road. If this call is unsuccessful, the interviewer continued to the house next door to this house, towards the starting point. If this call is unsuccessful, the interviewer continued to the house on the other side, away from the starting point.

Alternate Sampling Procedures – Camfed Sample in Tanzania and Zimbabwe

The Camfed samples in Tanzania and Zimbabwe targeted girls aged 8-19. Interviewers completed three different walk types, as follows:

1. Walk A: Same methodology used in all other GEC countries targeting girls aged 8-18
2. Walk B: Same household selection methodology as in other GEC countries but targeting girls aged 15-19 who had completed primary school through at least P4
3. Walk C: Purposive selection of girls aged 15-19 who had completed primary school through at least P4 and had recently received or are currently receiving a bursary

Stage 1: Locate midline households. Teams followed the procedures detailed above for finding midline girls. If the midline girl could be located, the recontact interview was completed.

Stage 2: Substitute household. If the midline girl could not be located, a substitute of the same walk type was found. For Walk A girls, the teams followed the same procedures described above, selecting a new household in close proximity to the original house. For Walk B, teams followed the same procedures, only selecting from eligible girls who met the walk type criteria. For Walk C interviews, team supervisors visited area schools to obtain contact details and locations for families in the area who have girls aged 15-19 who completed primary school at least through P4 and had recently or were currently receiving a bursary and used the day code to select among them.

The size of the Walk A sample is approximately equal to the sum of the Walk B and Walk C samples. We therefore decided to consider Walk A as the treatment group and Walks B+C as the “comparison” group in our analysis of the EM survey data. Difference-in-difference indicators for Camfed areas shown in the report must therefore be interpreted as the difference between two treated populations rather than a difference between a treatment and a control group. To avoid any confusion when comparing treatment with control areas, all aggregate effects across SCW exclude Camfed.

Household and Respondent Selection – Substitute Clusters

In rare cases, some clusters surveyed at midline were inaccessible at midline and needed to be substituted with new areas. As recontact interviews were not possible in these new clusters, teams needed to follow standard random selection protocol to select new households. Details of this methodology are as follows.

Stage 1: Meet with local administrators: Upon arrival in a new sampling point, teams first met with the local administrator/area chief to discuss the purpose of the survey and receive permission to continue. During this meeting, they received a list of major landmarks and community groups in the area.

Stage 2: Select starting points within sampling units. Team supervisors used the list of landmarks provided by the local administrator/area chief to sketch a rough map of the enumeration area. Their maps included at least 5 landmarks in urban areas and at least 3 in rural areas. Any semi-permanent structure – including clinics, chief’s homes, boreholes, community centers, markets, and wireless network towers - could be used as a landmark. The only landmarks teams could not use as a starting point were area schools. Teams used the sampling point ID to select the starting point for household interviews. If the last digit of the sampling point was even, the supervisor chose the most central landmark as the starting point. If the digit was odd, the supervisor chose the most remote landmark as the starting point.

Stage 3: Select dwelling. Interviewers and their supervisor gathered at the selected starting point, and headed in different directions to start their walking pattern. Using the day code (adding the digits of the day’s date together, until arriving at a single digit) the interviewer skipped the appropriate number of houses and started his/her assignment at the next house number, counting from the left. Using the appropriate sampling interval (every 3 in rural areas and every 5 in urban areas), the interviewer randomly selected additional other houses on this street to interview.

Example: If the interview was being conducted on May 23, the interviewer would have added (2+3= 5), thereby skipping 5 dwellings, and would have started on the 6th dwelling on the left side of the street. In an urban area, after the first dwelling they would have stopped at every 5th dwelling for an interview; if in a rural area, at every 3rd dwelling. If there were multiple households within the selected dwelling, the interviewers continued the skip pattern within the dwelling to determine the specific household for interview.

Stage 4: Respondent selection: Once a household or dwelling was identified, the interviewer surveyed the first available adult that could accurately speak about the composition of the household. The interviewer completed the “first informant” survey with this individual. As part of this survey, all girls aged 8-18⁷ were listed and the tablet randomly selected one. If an interviewer needed to use paper to complete the survey due to tablet malfunction, a Kish grid was used to randomly select a girl. If the household did not include any girls within the age range, a short survey was selected and the interview terminated. In households with eligible girls, after completing the “first informant” survey, the interviewer completed a “caregiver” survey with the primary caregiver of the randomly selected girl and then, if the caregiver gave consent, completed a “girl” survey and a set of reading and maths assessment with the randomly selected girl herself.

Exclusions from the sample

No population was excluded from the sample. Households that did not include at least one eligible girl aged 8-18 received a short version of the survey.

1.1.2 Sampling for the school visit survey

Interviewers visited all schools identified as being attended by the girls surveyed at the household level. They completed a survey with the school’s administrator and with the girl’s teacher.

Sample universe

The sample universe is defined in relation to the sample universe of the household survey. It does not represent a distinct sample universe relating to schools. Instead it adds information about the school environment for the sample of in-school girls interviewed as part of the household survey. [Table 6](#) lists the final allocation of interviews for each country at midline. School visit surveys were not conducted in Afghanistan, Sierra Leone, Tanzania, and the Camfed portion of the Zimbabwe sample.

Table 6: Achieved distribution of school visit interviews

Country	# Cases with achieved school administrator interview	#Cases with refused school administrator interview
Kenya	694	14
Mozambique	405	0

⁷ As previously discussed, the Camfed samples in Tanzania and Zimbabwe included girls aged 15-19 (general) and girls aged 15-19 who had completed primary school through P4 and had received a bursary

DRC	323	22
Zimbabwe (World Vision sample only)	105	0
Ethiopia	670	0
Somalia	527	10
Total	2724	46

School and respondent selection

Stage 1: School selection: Throughout completion of the household surveys, interviewers collected the names of schools attended by all randomly selected girls. In each household, if the girl's primary caregiver said the girl was enrolled in school, interviewers recorded the name of the school and name of the girl's teacher. Interviewers also obtained consent from the caregiver to visit the girl's school and collect attendance and grade information for the girl. This data was compiled in the field by team supervisors and teams were sent to each school after household interviews had been completed. A school survey was completed for all enrolled girls except those for whom the interviewer did not receive consent from the caregiver.

Stage 2: Respondent selection: Upon arrival at the school, interviewers surveyed the school administrator and each of the randomly selected girl's teachers. In some cases, interviewers arrived at the school to find that the randomly selected girl was not actually enrolled. Interviewers recorded this data and proceeded to complete surveys with the teachers of all girls who were listed as being enrolled.

Exclusions from the sample

If a randomly selected girl was enrolled in a boarding school that was located outside of the sampling point area, interviewers did not visit the school or complete interviews with the schools' administrator and teachers. Additionally, any local schools not attended by one of the girls randomly selected at the household level were excluded.

1.2 Details of field interviewing at endline

Fieldwork took place between November 2016 and April 2017. School assessments were completed at the same time as all other fieldwork.

1.2.1 Fieldwork governance and selection of interviewers

Table 7 lists the dates for field interviewing by country.

Table 7: Timescales for field research by country

Country	Dates	Number of Interviews	% of the total sample
Kenya	23rd January – 3rd March 2017	865	14%
Mozambique	2nd November – 20th November 2016	433	7%
Tanzania	2nd December – 14th December 2016	215	3%
DRC	28th March – 19th April 2017	438	7%
Zimbabwe	10th March – 1st April 2017	1076	17%
Ethiopia	21st November – 20th December 2016	802	13%
Somalia	15th February – 8th April 2017	821	13%
Sierra Leone	12th March – 1st April 2017	429	7%

Afghanistan	10th November – 8th December 2016	1200	19%
-------------	-----------------------------------	------	-----

1.2.2 Fieldwork governance and selection of interviewers

In each individual country, ORB worked with local partners that specialise in market, social, and opinion research. Our local partners were responsible for recruiting quantitative and qualitative interviewers and supervisors and overseeing fieldwork. In all countries, interviewers were recruited based on previous research experience, completion of (at least) secondary school, local language abilities, and familiarity with the areas in which they worked. In general, supervisors were selected based on previous experience as interviewers.

1.2.3 Training of interviewers

ORB conducted interviewer and supervisor training over a 2-week period in each country's capital city. Sessions covered a range of subjects including field methodology, questionnaire review, quality control, and pilot test review.

Training covered all aspects of administering the EGRA/EGMA assessments and focused on introducing the team to the assessments, learning how to administer them in the field and at least two IRR (inter-rater reliability) assessments were performed to ensure that all assessors administered the assessments accurately. As part of the pilot test, interviewers were required to conduct at least two EGRA/EGMA assessments with the girls they surveyed.

Survey training focused on field methodology, the ethics of working with children, interview techniques, questionnaire understanding and correct tablet usage. Quality control issues were also strongly emphasized. The following topics were covered:

- Field organization reminders for supervisors, managers, interviews
- Proper interviewing techniques
- Household selection procedure
- Respondent selection procedure and use of the Kish grid
- Call-backs and non-response
- Tracking refusals
- Importance of probing, interview techniques and interviewer etiquette
- General rules for working with children
- The importance of obtaining consent for all survey portions

Training included a question-by-question explanation of the household and school surveys. We addressed questions on the intent of certain questions, ways to probe for answers, and routing/filtering. All questionnaires were reviewed on paper first to ensure full comprehension of the different survey possibilities. After review of the paper questionnaires, the surveys were reviewed on the tablets. All teams then practiced all surveys on the tablets through mock interviews. Interviewers paired up and practiced the questionnaire with each other. This was a time-consuming process, as individuals played the alternating role of interviewer/interviewee, but it helped to further familiarize them with the questionnaire and its implementation. Local staff performed spot checks throughout the mock interviews to identify any issues with performance or comprehension. Several questions were flagged as problematic for interviewers – these questions were reviewed in-depth after mock interviews were complete.

1.2.4 Pilot testing

Teams completed two full days of piloting in each country. In all countries, teams travelled to a rural/semi-rural/peri-urban area to complete pilot interviews of all survey instruments. On the first day of piloting, the quantitative team completed 2 full household surveys each.

On the second day of piloting, quantitative interviewers completed group interviews of school administrators and teachers (in countries where this was applicable). Due to the large number of interviewers participating in the pilot, they worked in small groups to complete one interview with a single respondent. Each interviewer had the opportunity to ask a subset of the questions. All interviewers recorded all survey data in their individual tablets. Quantitative interviewers also completed one additional household survey.

ORB checked all quantitative data obtained during the pilot. This data and the piloting experience were discussed during a pilot review session. We discussed what went well and identified areas for improvement. All problematic questions were reviewed. In general, interviewers in all countries indicated that the pilot helped them to gain confidence in their abilities. They all felt more comfortable with the survey after fielding.

1.2.5 Training in Afghanistan

Due to security concerns in Afghanistan, ORB ran a five-day training session for Afghan trainers in Dubai. All aspects of methodology were covered and special attention was paid to training the trainers on how to run regional training sessions upon return to Afghanistan. Due to language differences, a pilot was not run in Dubai; all trainers completed the pilot testing during their own training sessions in their respective regions in Afghanistan.

The Dubai-trained supervisors managed twelve-day interviewer training sessions in all provincial centres. All interviewers were given the same sessions as the ones described above for other GEC countries, including EGRA/EGMA practice and mock interviews. At the end of the training, all interviewers participated in a quantitative pilot test.

1.3 Refusals and attrition

Respondent substitution

If selected respondents were not able or willing to be interviewed, interviewers moved to the next house for recruitment. Efforts were made if the selected individual was not in the house to contact them by phone or to locate them nearby. If when reached, they said they were willing to accept an appointment, then another time was arranged for them for the interview.

If the selected respondent was at home but refused to cooperate, the interview was regarded as an ineffective call, recorded as such, and the interviewer proceeded to the next household in the skip pattern.

Attrition rates

Across the nine countries, 73% of midline households were successfully recontacted. Recontact rates ranged from 58% in Tanzania to 83% in Afghanistan and Ethiopia. Information on attrition rates by country and the reasons for attrition can be found in tables 8 and 9 below. In cases where the baseline household was successfully recontacted but the baseline girl was either no longer in the household or had become ineligible for other reasons such as marriage, interviewers substituted within the household with another girl between the ages of 8-18. Information on the prevalence of this type of substitution can also be found below.

Table 8: Breakout of Refusals by Country

		Full Household surveys	Refusals	Total Contacts
Afghanistan	Number achieved	1200	124	1324
	Percentage of total contacts	91%	9%	
DRC	Number achieved	438	63	501
	Percentage of total contacts	87%	13%	
Ethiopia	Number achieved	802	57	859
	Percentage of total contacts	93%	7%

Table 11: Reasons for attrition

Reasons for attrition	Country								
	Afg.	DRC	Eth.	Ken.	Moz.	SL	Som.	Tan.	Zim.
Original Household could not be contacted after 3 callbacks	0	20	14	58	15	18	39	7	33
Family moved away from area (more than 1 hour away)	80	30	81	65	39	30	55	14	30

Original Household Refusal	3	8	2	18	4	4	5	1	1
Sampling point substitution	112	3	8	5	20	32	35	0	12
Girl goes to boarding school	0	2	1	29	8	9	2	0	2
Girl left to live with other family members (More than 1 hour away)	0	27	19	24	27	33	30	37	134
Girl left to take up work	0	2	7	3	4	2	0	5	24
Girl got married	5	6	12	14	14	2	9	6	57
Girl is no longer alive	0	5	1	1	0	0	1	0	2
Other	0	49	6	125	26	5	38	54	204

When attrition is too high, there is a risk that the original and the recontacted samples are not comparable anymore, either because some specific subgroups of the baseline population dropped from the sample (this is called non-random attrition and can happen for instance when older girls are getting married and leave the household) or because new respondents do not share similar characteristics to original respondents. For instance, if a girl aged 7 is replaced with a girl aged 17, the average learning score of the endline sample is likely to be higher compared to what it would have been if the 7-year-old girl had been successfully recontacted. This will then have an impact on the average score difference between the baseline and midline samples: this phenomenon is called “attrition bias”.

Attrition bias can also impact difference-in-difference estimators if respondents haven’t been substituted the same way in treatment and control areas. An easy way to check that attrition bias is not too high is to measure core characteristics that relate to the outcomes of interest across treatment and control areas. Those core characteristics should be similar between the full sample and the cohort samples and if different, difference should be comparable across treatment and control areas.

Table 12 shows these differences for a range of educational, social and economic marginalisation factors at baseline (“all” for the full sample and “coh” for the cohort sample). In the EM household survey sample, differences between treatment and control areas are similar in the control and the full samples, which tends to show that the midline and endline samples are comparable with respect to the main GEC outcomes and barriers.

Table 12: Endline attrition bias in the EM household survey sample

EM HHS data Midline averages		Girl's age	Girls' grade	LOI different from language spoken at home	PCG cannot read or write a letter in LOI	Girls' parents are not member of the HH	Girl has disabilities	Difficult to afford for girl to go to school	Household doesn't own land for them.	Household unable to meet basic needs	Gone to sleep at night feeling hungry more than 5 days in past year

1.4 Enforcement of quality controls

The EM implements rigorous standards during fieldwork to ensure quality control. Quality control was a high priority during the completion of fieldwork and numerous quality control measures were implemented.

To ensure that no interviewer has the ability to bias the results of the survey by producing false results, no individual interviewer was allowed to conduct more than five per cent of the total number of interviews. To ensure proper completion, the team supervisors checked all of the questionnaires. This was done each evening of fieldwork to identify and correct any potential issues as they occurred. Team members met every evening to discuss their experiences and any problems they faced during that particular day, and worked together to build strategies to overcome future problems.

Team supervisors were required to accompany a minimum of 10 per cent of the interviews conducted by each interviewer, checking that the correct instructions and procedures were being followed and the interviewing was of a high standard. Interviewer accompaniment took place predominantly at the beginning of fieldwork so that problems could be identified early on, and learning could be shared with the rest of the team.

Team supervisors were also required to back-check approximately 20 per cent of all interviews conducted by each interviewer. Back checking includes contacting the respondent directly in-person to ensure that the interview was done and checking the length of interview, as well as a selection of fact-based questions. Interviewers used paper cover sheets to record information such as name of the randomly selected girl, school enrolment status, and school name during the household interview. This data was confirmed during the back check process.

In all countries, independent verification of the data was conducted after fieldwork was complete. A local partner who had not been involved in initial fieldwork contacted a random selection of respondents by phone to verify that interviews had taken place. Independent verification did not uncover any falsified data in any of the nine countries.

1.5 Data Processing

ORB worked with the local teams to ensure that the data delivered is of high quality. Below we provide an overview of the data entry process.

1.5.1 Data Entry

Teams in all countries except Afghanistan used Nexus 7 tablets for quantitative data collection. Use of the tablets removed the need for data entry as all data was captured electronically during each interview. EGRA/EGMA data was collated in Tangerine, while Survey data was uploaded to the Survey to Go server. Both sets of data were then exported into SPSS

In Afghanistan, all data was collected on paper questionnaires and entered using ASCII. 20% of the questionnaires were double punched to ensure accuracy of data entry. Once all data had been entered, the ASCII file was converted to .sav SPSS format for delivery.

1.5.2 Data Merging

Both the household and school surveys were completed in pieces. A full household survey was composed of three parts (first informant, caregiver, and girl) and a full school survey was composed of two parts (school administrator and school girl). The survey pieces were linked using a unique ID – household ID for household surveys and school ID for school surveys. Upon completion of fieldwork, ORB created full cases using SPSS syntax that merged survey pieces using these unique identifiers.

1.5.3 Data Cleaning

ORB worked with the local teams to clean the household dataset. Data cleaning included recoding several administrative variables, creating some new variables to display data not captured by the PDAs, and disaggregating data for multiple-response questions.

Once fieldwork was complete, ORB worked with RTI, who was responsible for cleaning the EGRA/EGMA data. This data was returned to ORB, who merged it with the household survey data using a combination of unique Askia and Tangerine ID codes.

1.5.4 Weighting

Since non-response was low for all projects, no non-response weighting has been developed, nor is data weighted to local population totals since these are generally not known and regional totals do not correspond to project locations areas. Attrition weights have been developed to account for the varying levels of attrition across the different SCW project areas, but they changed the overall SCW results only marginally.

A note on the ownership of GEC data

The GEC data is being collected by the EM and by projects based on the contractual understanding that it would become the intellectual property of the DFID as the donor funding this research, and be eventually released into the public domain. This requires that the data be anonymised and made available in suitable form to DFID.

Currently, project baseline and midline data is uploaded to a web-based location hosted by the EM on behalf of DFID. In theory this data is primarily lodged as a “frozen” version of the evidence used to measure baseline change. However, a final version of all waves of data will become available to DFID after the EM has finished processing the data and applied thorough disclosure controls. The ultimate responsibility for disclosure control will be retained by DFID upon defining the mechanism for the release of the GEC data to the public domain.

Fieldwork issues

No major obstacles significantly affected the course of fieldwork. However, several issues emerged that affected field progress. [Table 18](#) provides an overview of the general challenges faced by field teams in several countries throughout the survey.

Table 13: General issues that arose during fieldwork

Countries	Issue	Action taken
Isolated incidents		
Zimbabwe	Permissions In Mangwe and Beitbridge there were delays with the Police and the Central Intelligence Organisation caused delays by querying the validity of permissions documents presented to them.	Permissions The Ministry of Education assisted the team in both districts and permission was granted
	Flooding and rains	Flooding and rains

Countries	Issue	Action taken
Isolated incidents		
	Fieldwork took place during rainy season which caused multiple accessibility problems due to flooding, poor infrastructure and stuck vehicles.	Alternative routes/means of transport were found, however this caused delays to fieldwork.
Tanzania	<p>Difficulty in contacting walk 'C' girls</p> <p>The contact list for walk C girls was inadequate since many had finished or left school. In other cases, no aid has been forthcoming in the last one year of so.</p>	<p>Difficulty in contacting walk 'C' girls</p> <p>Where necessary, snowballing techniques were used to locate others who had gotten a bursary to serve as substitutes.</p>
DRC	<p>Security Issues</p> <p>In some areas, residents suspected interviewers of being part of the Kamwina Nsapu militia.</p>	<p>Security Issues</p> <p>The team contacted the local police, local administrators, the ANR (National Agency for Intelligences) and different school administrators and presented the official documentation about the research agency and GEC project to allay concerns.</p>
Ethiopia	<p>State of Emergency</p> <p>The Ethiopian government had declared a state of emergency prior to fieldwork. Although fieldwork was mostly unaffected, network speeds and accessibility were significantly reduced. This meant it was not possible to upload Tangerine data during field.</p>	<p>State of Emergency</p> <p>Tangerine data was stored on the tablets and accessed and sent to ORB at the end of fieldwork.</p>
Kenya	<p>Kambios Camp in Dadaab</p> <p>The camp was in the process of being closed down as fieldwork was taking place. Respondents were less willing to take part and recontacting midline households was difficult as many had already left.</p>	<p>Kambios Camp in Dadaab</p> <p>Although fieldwork remained possible, the pace was slower and there was a higher rate of substitution at the Kambios Camp.</p>
Afghanistan	<p>Insecurity in Malikyar Village</p> <p>The interviewing team were accosted by an unidentified group who attempted to kidnap the team.</p> <p>Bomb Attacks</p> <p>Family members of the Kabul team supervisor were killed in a November bomb attack at Baqir UI Uloom Mosque in west Kabul.</p> <p>A team supervisor was injured in an attack on the German Consulate in Balkh province.</p>	<p>Insecurity in Malikyar Village</p> <p>When the field teams were released by the help of the village leader, they left the area immediately.</p> <p>Bomb Attacks</p> <p>The fieldwork was managed by the assistant field supervisor for three days until the supervisor was able to re-join the team.</p> <p>The fieldwork was managed by the assistant field supervisor for two days until the supervisor was able to re-join the team</p>

Countries	Issue	Action taken
Isolated incidents		
Mozambique	<p>Insecurity in Manica Province</p> <p>Due to the risk of conflict risk in the Barue District of Manica Province the District Director of Education Services informed the project team that it was not advisable for them to work in the cluster of Nhabuto in Barue District of Manica Province.</p>	<p>Insecurity in Manica Province</p> <p>Following consultation with ORB the client consented for the Nhabuto cluster to be replaced by Phandiza cluster.</p>
General issues		
All countries	Network coverage in many areas had poor or no network coverage making it hard for assessors and supervisors to communicate in case of need or for follow up and accompaniment purposes.	Teams often used local guides who would keep an eye on the households that were interviewed in to aid supervisors should they need to find their teams.
All countries	Network coverage in many areas had poor or no network coverage made uploading of data quite a challenge. The Tangerine software used to collect survey data required constant, strong, 3G-network access, which is non-existent in many areas.	Teams often waited until they were in urban areas/areas with strong network connectivity before uploading, which increased the risk of losing data and made checking the data difficult.
All countries	In many areas, teams lacked access to electricity to charge tablets and Wi-Fi routers.	All teams were given car chargers to use, which helped but did not solve the problem. In areas with no electricity, teams charged devices when they could and used paper copies of the survey when they could not. All data from paper copies was transferred to the tablets as soon as they were charged.
All countries	Unavailable/busy School personnel	When trying to complete the school portion of the survey (school administrator and school teacher surveys), teams often found that schools did not have good records (or any written records at all) and many school personnel did not have the time to sit for long periods of time to complete the surveys. This resulted in fieldwork delays as teams waited for school personnel to collect whatever information was available.
All countries	Misreporting school enrolment	In all countries, teams found that caregivers often said that their girls were enrolled in school. Upon arriving at the named schools however, teams found that the girls were not actually enrolled. This made it difficult to confirm completion of the school surveys.

1.5.5 Sample point substitutions

In some instances in several countries, teams required substitutes for originally selected sampling points. Reasons for the need to substitute varied by country and location. [Table 14](#) below lists all substitutions and includes the originally selected sampling point, the replacement sample point surveyed, and the reason for replacement.

Table 14: Overview of sampling point substitutions at midline

Country	Original Primary Sampling Unit (PSU)	Replacement Primary Sampling Unit (PSU)	Reason for Replacement
Afghanistan	Shora Zar	Dahan Kolani	Extreme insecurity: The road to Chaghcharan District was inaccessible as it was under the full control of Taliban and other insurgent groups.
Afghanistan	Zakhil Nahia 3	Noorbahal	Extreme insecurity: Taliban and other insurgent groups gained full control over Zakhil Village after severe fighting with the government forces.
Afghanistan	Haji Sharif	Tokali Sarai Qala	Extreme insecurity: During the entire fieldwork, Taliban was in control of this village and fieldwork was impossible.
Afghanistan	Haji baba	Haidar Abad	Extreme insecurity: During the entire fieldwork, Taliban were in control of this village and fieldwork was impossible.
Afghanistan	Deh Naw	Badghisy	Extreme insecurity: During the entire fieldwork, Taliban were in control of this village and fieldwork was impossible
Afghanistan	Qala Payen	Sar-e- Qala	Extreme insecurity: During the entire fieldwork, Taliban were in control of this village and fieldwork was impossible.
Afghanistan	Yangi Qala	Ghuzari	Extreme insecurity: During the entire fieldwork, Taliban were in control of this village and fieldwork was impossible.
Afghanistan	Zarshoy, Bala	Jamshidi Bala	Extreme insecurity: Taliban were in control of Zarshoy Bala Village and, as a result, the area was deemed to be insecure and inaccessible.
Afghanistan	Qarya Sahil	Sia Chob Mazar	Extreme insecurity: Fighting took place between the Taliban and government forces in Dahana-e Ghuri District during fieldwork and, as a result the area was deemed to be inaccessible.
Afghanistan	Zer Qala	Dahan-e-Eskar	Extreme insecurity: Fighting took place between the Taliban and government forces in Dahana-e Ghuri District during fieldwork and, as a result the area was deemed to be inaccessible
Afghanistan	Malikyar	Alwand east	The interviewing team were accosted by an unidentified group who attempted to kidnap the team.

Country	Original Primary Sampling Unit (PSU)	Replacement Primary Sampling Unit (PSU)	Reason for Replacement
			After the mediation of the village leader the field teams were released and instructed to leave the village immediately. In addition to this, there were several insurgent groups operating in this area that made conducting fieldwork impossible.
DRC	Mallam Abdulkadir Tsoh	Kwangwama	Insecurity
DRC	Bayan Ganuwa	Shugaba Abdu	Flooding
Mozambique	Nhabuto	Phandiza	Conflict risk/insecurity in Nhabuto [reported by the Barue District Director of Education Services]

2 Projects' data

Sources of projects' data

The evidence that projects have gathered through their endline research is documented and reported in three different formats:

- The **projects' endline evaluation reports** are prepared by the projects' external evaluators and present key findings and lessons learned around the effectiveness of project interventions at endline. The endline report sets out: what specific groups of girls each project is targeting, how many girls a project has reached, what contextual factors influenced project delivery and impact, whether the project has achieved a significant improvement in education outcomes, whether there has been a change in barriers to education, what interventions have been effective, and why, value for money and sustainability. Projects' endline reports draw on the quantitative and qualitative evidence collected by the project's external evaluator. Projects' endline reports have informed several sections of this report and were supplied to the EM by the FM between January 2016 and August 2016.
- In their **outcome spreadsheets**, projects consistently capture key outcome data, and report on progress against learning and attendance targets. Learning scores and attendance rates are reported in a standardised format and disaggregated by school grade, which enables comparisons and reporting across the SCW⁸. Capturing learning scores in systematic and verifiable ways is crucial, as all SCW projects are contracted under Payment by Results (PbR) schemes and only receive a full disbursement of their funds once they reach the learning targets that were agreed with the FM at baseline.
- The **projects' quantitative datasets** compile the quantitative data collected through the projects' household or school surveys and learning assessments. Learning scores have been reanalysed by the Fund Manager's M&E team for each project to verify their results reporting for the purpose of PbR. The EM has reanalysed household survey data for each project to complement the analysis that is done using the EM's household survey which has relatively small samples at the project-level.

It is important to note that many projects had difficulties merging their baseline, midline and endline data, and that

⁸ The outcome spreadsheets also capture information on enrolment but without breaking down by school grade. The outcome spreadsheets do not contain any data on retention, or gender differences in learning

most household survey data sets reached us not merged. It was not possible within the scope and timelines for the EM's work to merge datasets for projects. Therefore, our reanalysis has been limited in that baseline to endline comparisons have often not been possible. More details are provided in the following section.

Methodology for the EM reanalysis of projects' quantitative data

At the time of writing, all eight projects had submitted project level datasets to the EM. We carried out an independent "reanalysis" of this data for a selected number of key questions on barrier prevalence and exposure to interventions where the relevant information was available, documented and comparable. This "reanalysis" aimed to:

- Verify the figures and findings presented by the projects in their endline reports;
- Fill in any gaps in project activities, reach or impact that may not have been included in project endline reports;
- Be a source of information that could be compared with EM data and qualitative results to triangulate evaluation findings;
- Provide a comparative analysis of the level of barriers across projects at endline; and
- Analyse project impacts on barriers across the SCW portfolio by comparing levels of barriers between treatment and control groups.

Project data received by the EM varied in terms of the types of surveys administered, number of surveys administered, survey questions asked, type of respondents, data quality, and merging. In order to carry out cross-project comparison on key indicators, the EM chose to focus on the reanalysis of household surveys. It was selected because it was the most commonly administered survey among projects and included several variables that were commonly coded to measure barrier levels and exposure⁹. The datasets that could be used for reanalysis are outlined below in Table 15.

Table 15: EM reanalysis of SCW projects' quantitative datasets

Project datasets	Number of projects	BRAC	AKF	Acted	IRC	StC	Child Hope	WUSC	CfBT	StC	Plan	RI	Care	WV	Camfd
		Afghanistan			DRC	Ethiopia		Kenya		Moz.	Si-L	Somalia		Zimbabwe

Reanalysis methodology

Using the project endline reports and corresponding internal harvesting documents developed by the EM for analysis, each project was first individually assessed to determine which barriers it was addressing through its

⁹ A template household survey was designed by the EM and shared with projects to guide the development of their household surveys.

activities. Using the identified barriers as a guide, each project's household survey dataset was then reviewed to identify the variables that relate to each of the barriers and related activities (exposure/ change questions).

Variables for each of the barriers addressed by the projects and their associated activities were then compared against the master household survey template used in the EM analysis and shared with projects for use. Matching variables were then cleaned to ensure the coding was consistent with the EM template household survey, which included setting consistent variable names, variable labels and value labels, recoding categorical variables, assigning missing values, and generating a new series of variables for analysis.

Once a dataset had been reviewed and usable variables had been cleaned for consistency, the datasets were reviewed to ensure that they were in a consistent format and diagnostic tests were run to ensure data quality. The cleaned variables were then extracted from each dataset and merged into one meta-dataset. Each of the common and cleaned barriers and exposure variables were then analysed across projects.

Analysis of project data was then carried out to measure average barrier levels at midline and at endline in treatment and control groups, percentage of treatment and control households that reported being exposed to associated intervention activities, and, where datasets were merged, changes in barriers levels in treatment and control groups between midline and endline were measured.

Key challenges

The EM faced a number of challenges that limited the precision and depth of project data reanalysis that could be carried out.

Baseline, midline and endline data not merged

One of the most common problems encountered during the project data reanalysis was that baseline and midline datasets had not been merged. Due to inconsistent variable names, dataset structures and/or observation identification numbers, the EM was unable to undertake merging of midline and endline survey data for most of the projects. By contrast, the EM was able to merge the midline and endline datasets for all the projects except for AKF (Afghanistan) and ACTED (Afghanistan). As a result, only midline and endline data are presented here.

Changes in survey instruments from baseline to endline

In many cases, projects made changes to the questions or design of their survey instruments between baseline, midline and endline. The changes made meant that sometimes we had to either compare responses to modified questions or we were not able to track changes over time at all.

School-level and household-level data not linked

Another major limitation was that school-level data and household-level data were most often not merged and frequently identifiers that could be used to combine the datasets were either missing or unreliable. This had a number of causes. Several projects collected these datasets separately and did not attempt to record identifying information that would make it possible to identify what school the girls in a household attended. In other cases, because of problems with data collection or record keeping, these identifiers were either missing from the datasets or different series of identifiers were used in different databases so they could not be matched. As a result, it was not possible to conduct a higher level analysis of how barriers impacted learning outcomes, which were recorded at school level.

No control group data

Analysis of project data was further limited in cases where no control group data had been collected or included. In these cases, the EM was unable to compare barrier and exposure levels of the treatment group with any comparison group, and as such could not ascertain whether the project had had any impact on those variables. This happened for AKF (Afghanistan), ACTED (Afghanistan), RI (Somalia) and Care (Somalia).

Poor documentation of attrition

With large attrition rates, and possibly undocumented substitution households, we cannot assess how changes in the sample composition might account for apparent changes from baseline to endline.

Annex F – Further notes on EM sampling

Endline Report – Step Change Window

Final Report (December 2017)

Annex F – Further notes on EM sampling

This Annex replicates the narrative from our [midline](#) analysis of the prevalence of girls from our EM sample who attend GEC schools. This analysis was not replicated at endline, because it is time-consuming and would have led mostly to any change would have been only marginal considering the short timeframe (less than twelve months) between midline and endline.

As mentioned in [Section 2](#) of the report, the EM's and SCW projects' samples have been drawn randomly from lists of intervention and control schools submitted by projects before baseline. Sampling points were usually defined by school catchment areas: schools to be targeted by GEC projects' activities ("GEC schools") for the treatment group, and schools which were not part of projects' intervention ("non-GEC schools") for the control group.

At midline, the EM asked projects to confirm whether GEC-related activities were or were not taking place in the schools mentioned by girls in the EM household survey. Lists of schools harvested from the HHS were sent out through the FM for projects to flag whether schools were or were not part of their GEC intervention. This information was then exported back to the HHS in order to know for each in-school girl if she is going to either a "GEC" or a "non-GEC" school. At the time of writing this report, final lists had been received and cleaned for eight projects. **Error! Reference source not found.** below shows preliminary results for these eight project areas.

Table 16 : Proportion of in-school girls attending GEC schools in the EM midline HHS sample

% girls attending GEC schools	Treatment sample	Control sample
ACTED Afghanistan	31%	9%
IRC DRC	41%	20%
STC Ethiopia	78%	66%
ChildHope Ethiopia	81%	7%
WUSC Kenya	75%	50%
CfBT Kenya	52%	18%
Slums	27%	21%
ASALs	83%	12%
RI Somalia	80%	16%
CARE Somalia	63%	82%

There are two different ways of looking at this table. First, focusing only on the "Treatment group", the proportion of GEC schools should be as close as possible to 100% in treatment areas. STC (Ethiopia), ChildHope (Ethiopia), WUSC (Kenya) and RI (Somalia) all have averages equal or higher than 75%. This is a satisfying level considering that the EM sample is community-based and representative of all girls aged 7-17 in a school catchment area. It therefore includes girls going to boarding schools, to pre-primary or nursery schools, or to secondary schools, even if not targeted by GEC projects.

Oppositely, CfBT (Kenya) and IRC (DRC), ACTED (Afghanistan) and CARE (Somalia) to a lesser extent, show a much lower proportion of girls in treatment group that attend GEC intervention schools. In the case of CfBT, the difference between slum areas and Arid and Semi-Arid Lands (ASALs) is striking: while the ASALs' treatment group is in large majority made up of girls who attend GEC schools, the treatment group in slum areas has less than one third of girls attending GEC schools (which is only slightly higher than in the control group). This could be due to the large supply of schools in slums and to the difficulty of defining a school catchment area in places of high density of population where children from the same neighbourhood can go to different schools and more easily move from one school to another.

The second way of looking at this table is to consider the gap between the treatment group and the control group. In this respect, STC (Ethiopia) and WUSC (Kenya) have rather poor samples with half or more girls from the control group attending GEC schools. These two projects operate in particular contexts: pastoralist areas of Ethiopia; refugee camps and host communities in Northern Kenya. In those areas, populations are more mobile and school catchment areas may fluctuate and not have fixed geographic limits, which may explain why control areas have been "contaminated" by girls going to GEC schools. CARE (Somalia) exhibits an even worse pattern: it is the only project area where more girls attend GEC schools in control than in treatment areas. This raises the

question on how to accurately select treatment and control areas in such locations, and points the complexity of running longitudinal quasi-experimental designs in such moving contexts.

We have rerun difference-in-difference calculations for the main GEC outcomes, replacing the Treatment / Control group variable with a dummy variable for GEC / non-GEC schools. Results are shown below:

- **Attendance:** as mentioned in [Section 3](#) of the report, our household-based measure is not sensitive to small changes in attendance rates. We showed in the report that attendance did not change significantly at midline using treatment / control groups. Finding is the same when based on GEC / non-GEC schools.
- **Literacy:** similarly, we showed in the outcomes section of the report that literacy scores did not improve significantly on average in treatment areas compared with control areas. This is confirmed when using GEC / non-GEC schools: no significant effect is observed on the mean wpm score. At the project level, CfBT (Kenya) showed significant improvement in their treatment groups (33, 81, 35, 69, +14** wpm) but this effect is not significant anymore when looking at girls who attended GEC schools, although still positive. Oppositely, the two Ethiopian projects show significant positive results using the GEC / non-GEC dummy: +2* wpm for Save the Children and +5* wpm for ChildHope.

Across the SCW, the median oral reading score improved by 4 words per minute more in treatment than in control areas (0, 27, 0, 23, +4** wpm). However, when restricting calculations to in-school girls only, the increase is smaller and not significant (8, 33, 7, 29, +3 wpm). This finding is in agreement with our preliminary analysis based on the projects' lists of GEC schools. According to these results, the median oral reading score has increased by 1 wpm less for girls attending GEC schools than for those attending non-GEC schools (0, 25, 8, 34, -1 wpm).

- **Numeracy:** we demonstrated that SCW projects as a whole did not have a significant net effect on girl's literacy scores, based on a Treatment / Control group comparison from our EM data. This finding remains valid when comparing GEC with non-GEC schools (30%, 50%, 36%, 56%, +1% wpm). However, some projects which did not demonstrate an effect using treatment and control groups show significant improvements for girls going to GEC intervention schools. Those are STC Ethiopia (10%, 16%, 5%, 6%, +5** %-points) and CfBT (41%, 77%, 43%, 72%, +7* %-points).

To sum up, outcome findings changed little as a whole when using the GEC / non-GEC school dummy instead of the Treatment / Control variable used in the rest of the report, although they tend to differ at the project level¹⁰. At the window level, they confirm those described in [Section 3](#) of the report.

These results are given here as sense-checks of our methodology and results as well as projects', whose samples have been drawn according to the same protocol as EM samples. Further calculations could be made on other variables such as exposure and reach variables, as well as assumed barriers to education, in order to improve the robustness of our evaluation findings.

Whatever the outcome of this additional analysis, it gives a hint about the amount of difficulty involved in designing and applying valid and accurate quasi-experimental longitudinal designs throughout the course of the programme while relying on projects' own definition of treatment and control areas. The fact that the lists of sampling points were received by the EM in 2012, hence more than three years before the time of midline evaluation, have further increased this difficulty, especially in some fluctuating contexts where lists could have become inaccurate throughout the course of the programme.

¹⁰ It is worth noting here that the EM sample has not been designed to generate results at the project level. These are shown and commented only to help the reader account for cross-context variations that may not be accurately reflected in a window-level average.

SG_B1	Hello, I am interviewing on behalf of a research programme into education. We have carried out a survey of families in a few areas, collecting data about their children. The next step is to add more detailed information about the schools that they attend. We spoke to some families who said that their girls attended your school. They gave us permission to talk to you about their girls' time at school. Please can we ask you some questions about your school and record some information about attendance for the families we spoke to? Our visit at your school will help to build a representative picture of girl's experience of schools around here. We will record your answers to use them in our research but we will not mention you by name or share your personal details with anybody outside of our team. When we publish the data and results from this study we will ensure that it is not possible to identify you as the person who has provided these answers. Is that acceptable?	<input type="checkbox"/> 1 Yes [SKIP TO SG_B4] <input type="checkbox"/> 2 No
SG_B2	Record: main reason for refusal	<input type="checkbox"/> 1 No interview - no one at school <input type="checkbox"/> 2 No interview - no responsible person at school <input type="checkbox"/> 3 No interview - staff request reschedule <input type="checkbox"/> 4 No interview - Respondent couldn't speak any language in common with the

Annex H – EM Quantitative Tables

Endline Report – Step Change Window

Final Report (December 2017)

Annex H – Quantitative Tables

Table 17: Official school ages per grade, and duration of primary and secondary school cycles by country

In years	Afg	DRC	Eth	Ken	Moz	Sie	Som	Zim	Tan
Grade 1	7	6	7	6	6	6	6	7	7
Grade 2	8	7	8	7	7	7	7	8	8
Grade 3	9	8	9	8	8	8	8	9	9
Grade 4	10	9	10	9	9	9	9	10	10
Grade 5	11	10	11	10	10	10	10	11	11
Grade 6	12	11	12	11	11	11	11	12	12
Grade 7	13	12	13	12	12	12	12	13	13
Grade 8	14	13	14	13	13	13	13	14	14
Grade 9	15	14	15	14	14	14	14	15	15
Grade 10	16	15	16	15	15	15	15	16	16
Grade 11	17	16	17	16	16	16	16	17	17
Grade 12	18	17	18	17	17	17	17	18	18
Grade 13								19	19

Notes: Primary school grades shaded in light orange (◐); Secondary-school grades are shaded in darker orange (◑). Entrance age of primary is the age at which students would enter primary education, assuming they had started at the official entrance age for the lowest level of education, had studied full-time throughout and had progressed through the system without repeating or skipping a grade.

Source: For official starting ages: World Bank Development Indicators; UNESCO statistics; USAID Demographics and Health Survey (DHS). For school system information: UNESCO.

Table 18: Midline-endline difference-in-difference indicators across SCW project areas

Table 19 and

Tables 20 show outcome, exposure and barrier variables from the HHS and the SVS across the SCW: EGRA/EGMA variables, Outcome variables (starting with “O”), Exposure variables (starting with “E”), and barrier variables: Family factors, Poverty, Attitudes and Aspirations, Violence-related and School-related.

In the EM sample, Camfed’s project areas are not associated with any control group. As such, a comparison of treatment and control areas at the window level would be biased if including Camfed. It’s why it has been excluded from calculations from

Tables 20.

Left columns show a blue “1” when the variable is likely to be positively correlated with the main GEC outcomes (enrolment, attendance and learning), and an orange “-1” when negatively correlated with the main GEC outcomes.

Some variables are labelled as questions. In this case, the percentages are equal to the ratio of “Yes” over “No” answers.

In

Tables 20, in addition to the DID indicators and their p-value, the means for the treatment group and the control groups at endline are presented, along with corresponding sample sizes.

Difference-in-difference indicators have a green background when positive (with respect to GEC education outcomes) and significant. They have an orange background when negative (with respect to GEC education outcomes are significant). Darker green or orange is used when DID indicator is statistically significant at the 5 per cent level. Lighter green or orange is used when it is significant at the 10 per cent level. Grey cells show missing data or data with too low sample size to be shown (less than 50 individuals).

Numbers in the baseline-endline and midline-endline difference columns are sometimes coloured in green or dark orange (their font, not their background). This flags an increase or a decrease larger than 5 per cent and does not show the result of any statistical test. It is only shown to help the reader.

Table 18: Midline-endline difference-in-difference indicators across SCW project areas

EM HHS and SVS – MIDLINE to ENDLINE Difference-in-difference by SCW project area		5000	4999	5085	5147	5224	5097	5098	5170	5136	5252	5099	5096	5253	5274	5243	5101	5103	5102

Annex I – Outcome by Subgroup Reanalysis

Endline Report – Step Change Window

Final Report (December 2017)

Annex I – Outcome by Subgroup Reanalysis

SCW Outcome Subgroup Analysis – Limitations

The first step to perform the subgroup analysis was the replication of Outcome Spreadsheets in order to ensure that both the main variables to be used were correctly identified and that the data matched existing records. Due to difficulties identifying the correct variables, as well as to identify the observations that need to be excluded, STC (Mozambique) and Plan 2 (Sierra Leone) could not be replicated. In fact, eight out of 14 projects were successfully replicated while some discrepancies were found in the rest.

Once the replication process was over, the identification of variables to make subgroups in each project was performed. The main issues regarding this task were the lack of data labels and the presence of certain variables for some waves while not for others. While all available data was used, some groups of Childhope (Ethiopia) were calculated with midline data while others used only endline data. In other cases, learning and household survey data could not be merged due to difficulties determining a unique identifier or finding an identifier with duplicates. When this was the case, and the duplicated IDs were not too numerous, repeated observations were dropped in order to provide a subgroup analysis of a subsample as was the case of RI Somalia. In the case of Plan Sierra Leone, learning and household datasets had already been merged, yet the number of missing observations in household variables suggested data were only available for a subsample of girls with learning variables.

For BRAC (Afghanistan) and CARE (Somalia), datasets of different groups of girls were separated and could not be merged to provide an aggregated analysis. For the case of CARE (Somalia), this was due to different scaling methods used for calculating test scores among different types of girls rendering them incomparable. Moreover, literacy and numeracy datasets had not been merged and could not be without dropping several duplicated IDs which made replication fail. Hence, the analysis was limited to age and grade variables found in the learning datasets and separately for primary, secondary and out of school girls. For BRAC (Afghanistan) independent datasets by type of treatment were available for two of the three treatments, for which only government schools and OOSG were analyzed.

As a final remark, only very little projects had attendance data within learning datasets. Moreover, whenever data was available, OS results could be rarely replicated. Childhope (Ethiopia), Camfed (Tanzania and Zimbabwe) and WV (Zimbabwe) were the only projects where replication of attendance rates was nearly achieved.

Table 21 show project-level results of the outcome subgroup reanalysis for SCW projects' data. The key is the following:

++	The DiD indicator is positive and statistically significant at the 5% level (p-value < 0.05). Notation: 5%-DiD.
+	The DiD indicator is positive and statistically significant at the 10% level (p-value < 0.10). Notation: 10%-DiD.
✓✓	The simple difference (before-after) indicator is positive and statistically significant at the 5% level. Notation: 5%-SiD.
✓	The simple difference (before-after) indicator is positive and statistically significant at the 10% level. Notation: 10%-SiD.
⊕	Neither the DiD nor the simple difference is positive and statistically significant.
<p>Notes: For projects who have a control group, we first calculate the DiD indicator. If it is statistically significant, we report it. If it is not, we calculate the simple difference and report it if statistically significant. We only show indicators that are based on at least 30 observations. For projects whose baseline data is available, differences are calculated between baseline and endline. Otherwise, differences are calculated between midline and endline. The four projects whose only endline data is available will be described separately.</p>

Final Report (December 2017)

Annex J – Effectiveness: Intervention Mapping

Below we summarise the outcome of intervention mapping, which is used to capture the reported impacts of interventions on girls' attendance, literacy and numeracy outcomes at endline. All data presented below is gathered from harvesting of project endline reports. For a detailed presentation of the methodology (including limitations), refer to [Section 3.4](#).

- Notes:**
- 1 – **A*** indicates that the attendance target has been achieved from baseline to endline (only for projects with conclusive/partly conclusive data)
 - 2 – **L*** indicates that the literacy target has been achieved from baseline to endline (only for projects with conclusive/ partly conclusive data)
 - 3 – **N*** indicates that the numeracy target has been achieved from baseline to at endline (only for projects with conclusive/ partly conclusive data)
 - 4 – Inconclusive or missing evidence is marked with '⊖'
 - 5 – Interventions not included in project designs are marked in grey
 - 6 – Limited or no further changes since midline are indicated by '≡'

Below we summarise the outcome of barrier mapping, which is used to capture the reported impacts of interventions on barriers to girls' education. All data presented below is gathered from harvesting of project endline reports.

Types of evidence in relation to changes in barriers	Key
Barriers which have lessened or been removed: Barriers found at baseline or midline for which evidence shows that their influence is lesser or none at endline. Barriers lessened or removed are marked with '▲'.	▲
Barriers which have not changed: Barriers found at baseline or midline for which evidence shows that their influence has not changed at endline. Barriers with no change are marked with '≡'.	≡
Barriers which have worsened: Barriers found at baseline or midline for which evidence shows that their influence has worsened at endline. Barriers which have worsened are marked with '▼'.	▼
Barriers for which evidence is inconclusive or not available: Barriers found at baseline or midline but not reported/ discussed/ measured by the project at endline. Inconclusive or missing evidence is marked with '⊖'.	⊖
Not applicable: Barriers not reported by projects at baseline, midline <u>and</u> endline are marked in Grey .

Annex L – Sustainability

Endline Report – Step Change Window

Final Report (December 2017)

Annex L – Sustainability

- **Approach:** Information harvested from project report
- **RAG rating:** rating for each project alongside a table which looks at barriers and drivers of sustainability for each project and evidence of sustainability presented for each project activity. For the RAG rating projects were scored in two areas – **committed support and committed resources**. A score of green indicates a fully sustainable project with strong support and funding in place. Red indicates no viable evidence of sustainability for any activities.

Rating Symbol	Rating description
	Green: strong performance, evidence of a fully sustainable project with support and funding in place to continue all desired activities
	Green- Amber: performed well, evidence of support and/or funding in place to support major or a majority of activities. Or evidence of beneficiaries independently running activities
	Amber – Red: underperformance. evidence of work towards sustainable activities but major or a majority of activities are not sustainable
	Red: poor performance. No viable evidence of sustainability for any project activities

- All the reports include a section on sustainability and include general information that covers how sustainable activities are likely to be and the additional funding leveraged. The SCW sections tend to include more depth than IW and include more quotes from stakeholders.
- Not all project activities are included in the sustainability sections. In most cases there is little change in the sections from midline and little evidence of new activities or the development of activities to respond to challenges or changes

Table 37: STC (Ethiopia) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
<i>Global Level – DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National and district level – officials take over monitoring	Cluster Supervisors and woreda staff trained to		Woreda Education Office (WEO) and	Training has been provided on multiple occasions and to multiple groups		Likely: at least initially there is evident

STEP CHANGE WINDOW – ENDLINE EVALUATION REPORT - ANNEX L

<i>of use of project activities</i>	supervise and monitor (REB monitoring of schools and school management)	Regional Education Bureau (REB)	WEO officers expressed support for the programme In Semera, officials have begun other projects to improve girls' access to education including the construction of boarding facilities	commitment to maintain activities	
School level – Improved school buildings	Infrastructure Improvements and school construction	Community, Regional Education Bureau (REB)		Not at all school or WASH infrastructure planned has been completed Lack of local secondary school buildings Not all infrastructure projects are complete No funds in place to maintain	Unlikely: further support would be needed
School Level – New teaching methods are used and supported	Teacher Training	School	Teachers, school directors and school management all say that new gender sensitive teaching methods are being used		
School level – Sanitary products are provided for girls	Sanitary Pads and other material support	REB/WEO		No funds in place to maintain	
School level – New teaching methods are used and supported	PTAs	School		Some PTAs reported that they did not have time to follow girls education activities	
School level – New teaching methods are used and supported	Afar language teaching and school materials	School	Afar speaking teachers are present in schools one WEO rep said they had 99 or 346 teachers who can teach in Afar	No evidence of teachers staying in post No funds to maintain or replace materials	
School Level – Girls are supported	Girls clubs				No evidence
School Level – Barriers to attendance are reduced	School Feeding				No evidence

Overall Sustainability Rating

Drivers of Sustainability

- **Positive community attitude:** There have been strong changes in attitude within the community toward the support of girls' education expressed in FGD and KIIs, this change in attitude and expressions of support for girls education leads the evaluators to believe that schools will be maintained and textbooks replaced – although no additional funds or support are available to support this.
- **Green rated project activity:** Supervision of school by woreda staff, training has been provided multiple times, at multiple staff levels and is incorporated into job roles. Officials have increased their support for other girls education programmes

Barriers to Sustainability

- The endline evaluator suggest that conditions are in place to sustain around a third of the projects activities, at the time of the endline evaluation some project activities, such as the construction of school where not complete, respondents spoke about the continued lack of second cycle primary school and secondary schools close to communities. It is unlikely that the WEO and REB will have the funds to construct these school which limits girls' opportunity to complete a full cycle of education. Some of the projects activities are viewed as completed, such as the new school buildings – little concern with upkeep.
- **Cultural attitudes and practices:** The practice of *absuma* continued to act as a cut off point for girls' education, respondents said that efforts to tackle this had not been as intensive in community awareness programming and without follow up and government intervention was likely to continue as a problem
- **Lack of resources:** WEO's support the initiative but are under resourced and are not able to support the maintenance of infrastructure when the needs of other district school are greater. *"There are a total of 43 schools in our woreda including the mobile schools. Due to budget limitation we could not undertake all the planned activities and achieve the expected outcomes in our schools. For instance, we could not recruit enough teachers with good academic record. There are schools in our woreda that do not have enough desks and chairs.* (EL KII Participant from Ada'ar woreda).
- **Not all activities delivered:** Little evidence was found of Network Cards being given or used within schools, these were designed to make it easier for girls' to transfer between schools when they migrated. when girls were requested to select from a list all the activities that their parents, community members or school have done in the past three years, only 17 out of 2905 (0.6%) ticked that they were "given a network card". There were also schools without water points at endline.

Table 38: STC (Mozambique) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National level – <i>Government support for activities to continue</i>	Project Activities Generally		Ministry of Education and Human Development (MINED)	Linkages created between policy champions and government. Influence on national gender strategy Good relationships around literacy and numeracy agenda		Likely: Strong relationship with government seem to have been established
National level – <i>Government support for activities to continue</i>	Bursaries		MINED	Discussions to transfer knowledge and learn from the programme but no agreement in place		Unlikely: No decision to support has been made
Community Level – <i>Schools are more supportive of girls</i>	School Safe Committees	Contributions from Community members	Community members	Commitment from community to maintain these activities Brochure produced to highlight role of Gender focal point. This has been distributed to schools Community member have contributed to school safety funds Training delivered through a cascade model	No plan for materials or to provide support	Likely: At least initially
Community level – <i>Community is more supportive of girls</i>	Women's groups		Community members	Commitment from community to maintain these activities Trained to deliver advocacy messages as radio broadcasts stop	No plan for materials or to provide support	Unlikely: Further support would be needed
School level – <i>Girls are supported in their education</i>	Girls clubs		Community members	Manual developed for girls and teachers on how to run girls' clubs		Unlikely: Further support would be needed
School level – <i>Teachers are better trained</i>	Teacher Training		Ministry of Education	Strong commitment from MoE to scale up literacy boost Work with teaching colleges to integrate training		Likely: Support established to continue activities

Door to door awareness raising	No evidence
School kids	No evidence
Radio Programme	No evidence
Mini libraries and school libraries	No evidence

Overall Sustainability Rating

Drivers of Sustainability

- **Community Commitment:** The project aimed to establish a strategy with government for the take over and expansion of school kits and secondary bursaries. Qualitative evidence suggests that literacy promoters, gender focal points, and women's groups are eager to continue community sensitization activities after the project ends. There are some communities where financial contributions have been made to school support funds.
- **Teachers are positive about new teaching methodologies:** Teachers are reported to have witnessed results with the literacy and numeracy boost methodologies, many say they will still apply it after the project's conclusion. As one head teacher puts it: "*Save has contributed to a change of attitude and approach towards teaching,*" although there do not seem to be any formal structures in place to support this.
- **Use of cascade training models:** School Safety Committee training was designed to be delivered through a cascade model and training materials are available. Community members have made financial contributions to committee funds.

Barriers to Sustainability

- **Reliance on community:** there are significant concerns regarding incentives provided by PAGE-M and whether communities will still be willing to participate in sensitization activities without these incentives
- **Restricted access to communities for officials:** It is likely the political tension in Manica and Tete will hamper the monitoring activities of district and provincial officials, who do not have private transport to access rural areas and access to public transport is limited: "*the movement and circulation is practically closed and our interventions are needed more in the district than here in the city, the people who need more of our support are in the village rather than in town, so at this moment it is difficult to reach those people who need our support because of this crisis that we have in the country*"

Table 39: BRAC (Afghanistan) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design
National level – <i>Children transfer to government schools</i>	Classes in Hub schools		MoE	MoE committed to taking over BRAC classes in hub schools	Limited awareness of handover activities from government officials and shuras Lack of resources for children to attend hub schools and lack of transport to schools	Likely: transition planning is ongoing although resource may be limited
National level – <i>Government takes over community schools</i>	Community Based Girls Schools (CBGS)		MoE	Officials have monitored activities and positive relationships developed MoE committed to taking over classes in communities that are close to hub schools Handover meetings with community members have informed them of the process and handover plans for individual students shared with mothers	No funds from government to establish as outreach classes Many schools will not be supported by MoE A plan for how the takeover would happen was not in place at endline Limited awareness of handover activities from government officials and shuras	Unlikely: resources are not committed to take over
Community Level – <i>Cost of school is reduced</i>	Mothers Forum		Community members		Mothers do not see why forums would continue after the project finishes and state the opinion that attitudes have already been changed	Unlikely: Community is not committed to continuing this activity
School level – <i>Teachers are better trained</i>	Training of Government School teachers and teacher recruitment					No evidence
School level – <i>Girls are better supported</i>	Peer Mentoring				No plans in place to recruit new mentors No funds to continue activities	

Community level – Cost of school is reduced	Stipends			No funds to continue activities
Community level – Cost of school is reduced	Community and Stakeholder Workshops	Community members	There are evident changes in attitudes	No funds or plans in place to continue workshops

Overall Sustainability Rating

Drivers of Sustainability

- BRAC’s (Afghanistan) sustainability strategy primarily focuses on the handover of CBGS graduates to government hub schools, with a number of key activities to support this process. At the point of the endline report it was unclear how effective this handover is likely to be.
- Changes in attitude might outlast the project: While there are more positive attitudes towards education in the community, it seems unlikely that girls would be permitted to travel any distance to attend the hub schools, one person commented “*Yes few numbers of girls will go to government school after finishing the community school because we have insecurity problem in our country for example: in the previous month some of the government school girls have been kidnapped and after three months we just found their corpse. (Focus group with community stakeholders, Kabul, District 4).*”

Barriers to Sustainability

- Reliance on Funding: the majority of project activities are reliant on additional funding being found in order for them to continue.
- Late in building relationships with government: PED and DED officials are positive about the project but late relationship building means that they have not been involved throughout the life of the project – limiting opportunities for activities to be taken on by the government. Some communication problems seem to remain. One district official said *BRAC foundation informs us just through notes. And we solve their needs by launching some workshops, but BRAC foundation has not told anything about their works and plans for us yet. (DED official, Jabul Saraj District, Parwan)*
- Transfer to government schools: Girls are planned to transition to government hub schools in order to complete a full cycle of education, however for most families this is unrealistic, the hub schools are very far from CBGS communities and where insecurity is a strong barrier, and for families that are poor and cannot afford to support girls’ school costs and safe transportation. Parents have also expressed concerns about teaching quality in government schools. At endline, government officials did not seem to have a plan for how the transitions would take place or understanding of the barriers that girls might face in the transfer.

Table 40: Plan (Sierra Leone 1) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design
National level – <i>Government support for project activities</i>	Project activities generally		Ministry of Education Science and Technology (MEST)	MEST monitoring visits to schools but no formal advocacy	Formal advocacy planned by the project was curtailed by the Ebola emergency	Unlikely: further actions required
National level – <i>Government support for project activities</i>	Bursaries		MEST		No further resources obtained	Unlikely: further actions required
National Level – <i>Broadcast continue</i>	Radio Broadcasts			Teachers and girls report a more supportive atmosphere Students in school are beginning to use contraception	No plans for future broadcast	
National level – <i>Teachers are better trained</i>	Teacher Training		MEST	Teachers and girls report a more supportive atmosphere Qualitative evidence shows that corporal punishment is being used less in schools	Teachers are poorly trained – no plan to ensure that schools are able to afford to employ better trained staff No plans for follow training	Unlikely: further actions required
School level – <i>Girls are better supported to learn</i>	Study clubs		Schools	Additional cohort of programme volunteers (PV trained to run a new study group at 180 schools)	No plans to source the financial support they need	Unlikely: further actions required
Community level – <i>Community more supportive of girls' education</i>	Child led and parents advocacy groups		Schools			No evidence
School level – <i>Support children with disabilities</i>	Individual support to children with disabilities		Schools			No evidence

School level – Teachers are better trained	Learning Assistants	FAWE and OU	Schools and partners	Some evidence of learning assistants attending teacher training courses Trainings provided by FAWE and Open University to support the Las in their understanding of key subjects – in particular maths, English, and methods of teaching	Likely: partners delivering activities
---	------------------------	----------------	-------------------------	---	---

Overall Sustainability Rating

Drivers of sustainability

- The project recognises that sustainability of the project’s impact would involve scaling up and scaling down different aspects of the programme. There are particular plans to scale up activities around skills development and capacity building, in line with government priorities. Linkages with other projects on areas such a girls’ clubs and teacher training are also planned. Plans for the continuation of activities take account of what was successful about programme activities and where improvements could be made – for example new study groups will be facilitated by two teachers, one specialist in science subjects and one specialist in arts subjects with the goal of improving the quality of teaching.
- **Independent formation of groups:** There are reports of study groups forming outside of the intervention which bodes positively for sustainability after the GEC. Head teachers and school management are supportive of the groups.
- **Positive impacts for individuals:** Learning assistants have enrolled in teacher training college and are likely to go onto teaching careers.

Barriers to sustainability

- Possibilities for advocacy with the government of Sierra Leone were limited by the Ebola crisis, and the crisis meant that information sharing and the dissemination of information gathered through children's clubs was limited. This included a scaledown of the scorecard activities which were not practical during the Ebola epidemic.
- The quality of teaching both in schools and in girls clubs remains low and additional training is needed to provide girls with a good education. PTA members, teachers and principals indicated that there a few well-trained teachers within the schools and they cannot afford to hire teachers with more advanced qualifications

Table 41: Plan (Sierra Leone 2) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National level – <i>Government support for project activities</i>	Project activities generally		MEST	Capacity building has focused on teams from local governments with the goal of MoEST taking leadership of programme activities		Unlikely: no concrete commitments are evident
National level – <i>Broadcast continue</i>	Radio Broadcasts		MEST	62.7% of endline respondents feel that their communities have become more supportive of girls' education in the past three years.	Girls still felt that they did not have control over their education and where unlikely to be able to stay in school – 61.5% said they believe that they cannot stay in school and 38.5% that they do not have the power to make decisions about their future	Unlikely: no concrete commitments are evident
National Level – <i>Government support for project activities</i>	Bursaries					No evidence
School level – <i>Girls are better supported to learn</i>	Study Groups					No evidence
School level – <i>Girls are better supported to learn</i>	School plans to address child protection and psychosocial support available for children			200 schools are reported to have developed action plans Amongst 44 schools visited at endline 84.1% monitor and refer child protection issues	Only 18% of schools visited at endline provide support to students regarding sexual health and early marriage	Unlikely: Further support to implement plans is needed

Overall Sustainability Rating

Drivers of sustainability

- The project has undertaken some capacity building work with the Ministry of Education, Science and Technology with a view for them to take over the running of activities – but there is no evidence of handover plan or definite commitments from the government.

Barriers to sustainability

- There **are remaining attitudinal and cultural barriers to girl's education**: early marriage and pregnancy emerged in the qualitative research as key barriers to girls completing a cycle of education. Current government policy prohibits pregnant girls from attending school or sitting for vital examinations; the latter prohibition prevents their advancement to higher levels of education. In FGDs girls suggested that this was a widespread problem *"is not a good place for growing girls, because most of the young girls in the community within PS and JSS mostly get pregnant while they are still in school and this led most of them to drop out."*
- Lack of financing**: Project activities like bursaries require sustained funding to continue – currently when school materials or uniforms become unusable it is unlikely that families would be able to afford to replace them.

Table 42: IRC (DRC) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
School level – <i>Schools manage distribution of bursaries</i>	Scholarships		Schools and community members	Management by parents committees and schools has strengthened their capacity to be better involved in school management Committee members have said that they will continue to be engaged in school management activities	Parents earnings continue to be low – making it difficult to afford school fees Schools do not have the resources to offer scholarships themselves Schools fees still charged by government	Unlikely: No financial resources to maintain activities
School level – <i>alternative education practices available</i>	Accelerated Learning Programmes (ALP)		Local NGOs and MoE	Materials passed to government with documentation on lessons learnt and good practice Curriculum on how to deliver the programme developed for local NGOs		Unlikely: further support would be needed

STEP CHANGE WINDOW – ENDLINE EVALUATION REPORT - ANNEX L

Community Level - Literacy of community members improved.	Community Literacy Boost Activities	Community members	Community volunteers being trained to continue the activity		Unlikely: further support would be needed
National level – Teachers are better trained	Teacher Training and Support	MoE	Strategic partnership developed with relevant Ministry for the development of in-service teacher training policy Project supporting development of national tutoring strategy using lessons learnt	Level of education of some teachers is very low, making it difficult for teacher training to impact subject or literacy teaching	Likely: agreement to incorporate into education system
School level – Schools are more girl friendly	Gender focused school improvement plans	Community conversations	Parents' Associations	99% of schools had gender focused school improvement plans in place at endline COPAS have raised funds from community members for construction of latrines	Girls report of violence in schools actually increased over the course of the project Unlikely: Further support would be needed
Community Level – Improved household incomes	EA\$E VSLA Groups		Girls Rising, Community members	Volunteers have been trained to expand the programme and supervise groups Coaching on themes relevant for each group has been provided Seeking partnership with Girls Rising to continue community conversations	Unlikely: no solid commitments at endline
	School improvement Grants				No evidence
	Provision of textbooks and other learning materials				No evidence

Overall Sustainability Rating

Drivers of Sustainability

- **Incorporation into national education system:** Project supporting development of national tutoring strategy using lessons learnt and partnership with ministry on teacher training.
- In interviews, the VSLA groups are seen as the main project activity that has the potential to be sustainable. Interviewees suggest that the VSLA has helped parents save in order to pay school fees but there is some doubt whether groups would be able to sustain this in the longer term as structures or training to support groups or ensure sufficient diversity does not seem to be in place *“This association [VSLA] has taught parents to save money so as to help ensure the education of their children. The activity works well because the project is supervising. But I very much doubt that when the project leaves, the VSLA will continue working well. There will be lots of disorder. Community leader, Katanga.”*
- **Training at multiple levels:** The tutoring programme and child protection system established by the project both trained at multiple levels – volunteers, teachers and school directors- to build sustainability of project activities. In the case of child protection, this meant that there were more spaces available to children to report abuse and leveraging existing structures increases the possibility of lasting impact.

Barriers to Sustainability

- The endline research highlights a number of areas where barriers to girls’ education persist, particularly around household work and marginalisation and discrimination. Discriminatory attitudes towards Batswa children persist both amongst communities and education officials, one official from the school authority said *“A pygmy girl can start a school year, but will not finish it. There is a lot of drop-out. They leave the class to work in the fields. It’s especially during the harvesting of caterpillars [chenilles] that they flee from class – and it’s for always [i.e. they never return]. School authorities, Equateur.”*
- There are also concerns that earnings from VSLA will not be enough for parents to be able to afford fees *“Our parents do not have the means for paying our school fees; that’s why we’re chased from school [in the past]. Beneficiary children Kasai (in Kasai more children than in Equateur said they wouldn’t be able to finance the studies).”*

Table 43: Camfed (Zimbabwe and Tanzania) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National level – <i>Life skills training</i>	Life skills training (My Better World)		Camfed and partners	Rolled out into 4 non-project districts	No evidence of any resource to sustain these groups in projects areas	Unlikely: further resources required
School level – <i>Improved teaching methods</i>	Subject Study Guides		Camfed and partners	Teachers used these resources in the classroom with positive learning impacts in math’s Already rolled out into 4 non-project districts	No evidence of any resource to sustain these groups in project areas	Likely: Initially at least
Community Level – <i>Financial</i>	Step Up Fund					No evidence

STEP CHANGE WINDOW – ENDLINE EVALUATION REPORT - ANNEX L

<i>support for girls education</i>					
Community level – Financial support for girls education	Bursary				No evidence
School level – Improved teaching methods	Teacher mentors and teacher training				No evidence
School level – more girl friendly environment	School child protection policy				No evidence
National Level – Teaching standards are improved	Recruitment of learner guides	Teacher training Institutions	3,653 young women were trained to become learner guides across the 2 countries Learner guides have achieved places at teacher training colleges and been able to improve their academic qualifications Improved status within communities Qualitative research showed that guides were committed to continue to support girls	Ongoing training and support requires financial resources	Unlikely: further resources required
Regional level - increased technology use in schools	Mobile platform, to support education planning			Learner guides have been using alternative technologies to connect with each other outside project activities Requires ongoing maintenance and support	Unlikely: further resources required
Community level – Increased support for girls education	Engagement of CAMA and parents support groups	Community Contributions	Community members have raised fund to pay for school feeding	Ongoing training and support would be necessary to build on and expand these activities	Unlikely: further resources required

Overall Sustainability Rating

Drivers of Sustainability

- The evaluators are confident that project activities have had a potentially sustainable impact on the individual girls who have participated, their higher educational attainment, increased confidence and positive attitudes and access to business loans is likely to stand them in good stead as they leave school. There seems to have been a particularly positive impact on Learner Guides who in some cases have become quite engaged with community decision making structures “*They [local authorities] used to ask ‘Who are you?’ when I came to meetings. Now if I don’t come they ask ‘Where is she’ because they want my input.*”
- **Use of existing Camfed structures:** The use of structures such as CDC, Parent Support Groups (PSGs), Mother Support Groups (MSGs) and CAMA members has enabled the project to actively engage with community members and there was evidence in the qualitative research of these groups working together to support the goals of the project. Using these structures to manage other projects is also seen as having been cost effective and a sound base for other interventions – for example initiatives building women’s skills in entrepreneurship
- **Interest from other organisations:** In Tanzania Learner guide programme has already been rolled out into different districts, there has also been interest expressed from the Education Commission (International Commission on Financing Global Education Opportunity) to explore the wider potential of the Learner Guide mechanism with the Tanzania Government. In Zimbabwe District Schools Inspectors have been integrated into the delivery and support of the Learner Guide Programme through being trained as BTEC assessors, and will continue this as part of their regular work

Barriers to sustainability

- **No alignment with government:** The project activities are not aligned with government activities and are unlikely to receive government support – in many cases continuation is reliant on group members being willing to continue activities without any support
- **Reliance on community members:** In the longer term the project relies on voluntary groups and structures remaining committed to the project and is unlikely to be sustainable without government support

Table 44: WUSC (Kenya) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
School level – <i>Construction of new infrastructures</i>	Construction of Girl Friendly Learning Environments	Community contributions	Community	Sanitary blocks constructed at 30 schools. 48 teachers hired and 36 classrooms built and books distributed KEEP has encouraged a sense of ownership of new facilities in the hope	Consequences of insecurity mean that pupil/teacher ratio has not reduced No evidence of ongoing funding to support teacher salaries	Unlikely: further resources would be required

STEP CHANGE WINDOW – ENDLINE EVALUATION REPORT - ANNEX L

			that they will be looked after	
School level – Better trained teachers	Teacher Training		700 teachers have received training	Not all teachers in a school training – not clear if there was any impact on school environment Unlikely: further resources would be required
School Level – Management structures are improved	Training PTAs and Boards of Management		860 members have received training	No plans for training for future members Unlikely: further resources would be required
School level – Support for girls' education	In-kind support (uniforms, sanitary wear, school supplies, textbooks)			Quality of sanitary products and distribution is seen as poor Unlikely: further resources would be required
School level – Support for girls' education	Remedial classes			No evidence
Community level – support for girls' education	Solar lamps		21,029 lamps delivered KEEP has encouraged a sense of ownership of new facilities in the hope that they will be looked after	Some evidence that lamps were not being used as intended and some had been sold for cash by households No support available when lamps stopped working Unlikely: no plans for replacement or maintenance
School Level – support for girls' education	Secondary School Scholarships	UNHCR	Expanded by 50% from original plan assisting 359 girls Partnerships with other agencies meant another 102 girls benefited	Demand for scholarships far exceeded supply and resources not available to facilitate transition to secondary schools Likely: additional support has been secured
School level - support for girls' education	Counselling to improve learning outcomes		6500 girls received counselling Expanded from initial plan to adopt a cascade model which includes counsellors, peer-to-peer counsellors along with community mobilisers with a cascade model Linked into child protection system with	Unlikely: further resources would be required

		counsellors charged with reporting cases as necessary	
Community level – support for girls’ education	Community Mobilisation		No evidence
School level - support for girls’ education	Girls Clubs		No evidence

Overall Sustainability Rating

Drivers of Sustainability

- **Partnerships with other agencies:** Support from UNHCR and other agencies was secured to deliver more scholarships than the project had envisaged but there are no clear plans for the continuity of these activities
- **Cascade model for counselling:** This activity was also delivered on a larger scale than had been envisaged by the project. The amended counselling, meant to help girls overcome family or personal issues, was designed using a cascade model and included training for multiple professional groups, which included counsellors, peer-to-peer counsellors along with community mobilisers. There were no clear plans for ongoing training or support.

Barriers to Sustainability

- **Teacher Training was not comprehensive:** The training provide to teachers as short and the project recognises that it was unlikely to fully counter years of habit in teaching methods. The endline research found variable levels of commitment to using new techniques in the classroom. One respondent commented *“It is clear that a one-week training session can do no more that introduce new ideas. However, according to feedback from participants, they now have a different outlook on their role and the importance of doing their best to ensure that all learners, girls and boys, meet success.”*
- **Evaluators found that WUSC made little effort to package or communicate project results and activities for local or national officials or donors in order to try and build support for the projects activities once the GEC ended – initially there is no advocacy strategy as part of the project. KEEP did some advocacy around girls’ scholarships although there is no evidence that their activities have had any impact on government policy. WUSC also report a general worsening economic situation amongst households in the project areas.**
- **Reliance on community:** The level of engagement of school governance structures remains very variable across the project areas. The project is reliant on the election of committed and qualified people. There was more emphasis on building the capacity of BoM and PTAs later in the project towards the development of school improvement plans but it is unlikely that there will be sustainable improvements in school governance
- **Changes in attitude are linked to material support.** There are both positive and negative views of the sustainability of attitude change in the project areas. At endline there were more positive attitudes to girls’ education from the community but the sustainability of these attitudes seems low as they often seem to be driven by the material support girls’ received. *If KEEP was to end, enrolment, performance would all go down because there will be no uniforms, textbooks, solar lamps for night studies. There will be dropouts because KEEP is the one providing scholarships, sanitary wear, pays teachers. If KEEP pulls out, many*

girls will stay home. Absolutely no resources for maintenance of these inputs in this community unless provided by a project like KEEP. Opinion leader, Sarif Primary; Sarif, Wajir County

Table 45: ChildHope (Ethiopia) reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National level – <i>Support to girls with disabilities</i>	Support of girls with disabilities	Contribution from FANA		385 girls with a disability have been supported Partnership with FANA has enable the project to train 800 teachers on disability with a core group trained to carry out assessments	Awareness raising and training activities have not been comprehensive	Unlikely: further resources are required to support
School level – <i>Children are safer at school</i>	Systems to report abuse		Schools	Case Management procedures developed Student feel more confident reporting abuse direct to teachers	Requires funds to continue or transfer to women's and children' affair bureau	Unlikely: further resources are required to support
School Level – <i>Support for learning</i>	Extra tutorials		MoE		Will continue as government supports extra tutorials for low performing students	Likely: This type of activity is already supported by government
Community level – <i>Improved Livelihoods</i>	Community self-help groups	Community contributions	Established Cooperatives	Most groups have been handed over to government supported cooperatives		Likely: transfer of most of these organisations has been achieved
	Sanitation facilities					No evidence
	Grants to families					No evidence
	Training for stakeholders committees					No evidence
	Mentoring volunteers and tutors					No evidence

Material Support (books and uniforms)	No evidence
Teacher training	No evidence
Clun and Reading corners	No evidence
Community conversations	No evidence

Overall Sustainability Rating

Drivers of Sustainability

- **Changes to government policy:** There is an increased government commitment to supporting schools to track attendance and truancy. There is also an increased focus on active learner methods and safer school environments. The project is planning to transfer the monitoring of the learning framework to *woreda* officials for GEC-T but there is no evidence of firm commitment to take over activities
- **Incorporation into national structures:** Community self-help groups transferred to become government supported cooperatives and are very likely to continue their work. The project states that extra tutorial classes will be supported by the government as they support this kind of activity but there is no discussion of how this would be handed over or indication of financial support from the government

Barriers to Sustainability

- There is very little evidence on the sustainability of this project in the endline report, most activities would require ongoing support and financial resources to continue

Table 46: AKF (Afghanistan) reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National and regional level – <i>MoE takes over project activities</i>	Community based education classes	MoE	MoE	350 CBE/ALP classes have been handed over to the nearest government hub school at time of endline evaluation Some resources provided by project to girls making the transition to government	No classes taken over as community outreach classes – main barrier seems to be the resources to pay teachers Community members are unable to contribute to	Likely: Transfer is ongoing but unclear how successful it will be

STEP CHANGE WINDOW – ENDLINE EVALUATION REPORT - ANNEX L

		hub schools – including textbooks and uniforms	continuing as community classes No community mechanism in place to raise funds Limited support available to support transferring students in hub-schools No affordable transport options are available to girls in order to travel to schools	
Regional and National level – <i>Teacher training is improved</i>	Teacher Training and support	Guidance materials, textbooks and training material have been distributed PED/DED staff mentioned attending training around gender awareness and the CBE handover process Apprenticeship programme was successful in some areas and graduates are teaching classes	Capacity building at province and district level not national lever Some perceive a lack of support from the government and some graduates have been unable to find jobs	Unlikely: further resources and commitment would be required
Community Level – <i>More positive attitudes to girls' education</i>	Community Events and media on girls' education	Evidence of behavioural changes that may be sustainable for communities	Some evidence of a sense of disillusionment with education resulting from closure of schools and lack of employment opportunities	Unlikely: further resources are needed
	Training of school management counsels (shuras)			No evidence
	Accelerated learning classes			No evidence
	ECD classes			No evidence
	New and renovated school infrastructure			No evidence
	Provision of school equipment			No evidence

Overall Sustainability Rating

Drivers of Sustainability

- **Partnership working:** implemented by a consortium of partners including the Aga Khan Foundation (AKF), Aga Khan Educational Services (AKES), CARE Afghanistan, Catholic Relief Services (CRS), Save the Children (SCI), Afghan Education Production Organization (AEPO) and Roshan Telecom.
- **High level of community contributions:** Communities have made large financial and in-kind contributions worth a total of £1,664,821 (likely to increase by the end of the project in March 2017)

Barriers to Sustainability

- **Government takeover:** AKF plans for CBE classes to be taken over by the MoE at the end of the project, however there is a mixed picture on how realistic this transfer is. In some districts CBE girls are already successfully transitioning to hub schools however in others there appears to be a lack of funding required to make this possible. Girls who have transferred have tended to be from higher income households and there is a risk that the most marginalised girls will not continue to benefit from education. In no cases has the MoE been able to continue the classes as community based, when asked community members said that were not able to make the level of contributions that would be required to pay teachers' salaries to continue CBE classes, there was an isolated example of a respondent who thought that this might be possible. *Yes, there are individuals and people in the community who told us that in case of extending the cooperation of education department; they are ready to pay a limited amount of teachers' salaries in order to continue these classes. (STAGES partner interview, Kandahar)*
- **Distance to school/ Security Concerns:** Interviews with PED officials revealed that they would be willing to open schools in more remote areas however they would require signed agreements from anti-government organisations present in the area before making any financial commitment
- **Ongoing issues with women's participation:** Female shura members have had more limited roles than their male counterparts in decision making, advocacy and communication with project partners. It was found that female members are not benefiting equally from capacity building training, workshops or mentoring. At endline it was also evident that the majority of the community contributions towards the project have come from men – perhaps due to continued restrictions on women's mobility

Table 47: ACTED (Afghanistan) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – DFID funding through GEC Transitions	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National level – Ministry takes over responsibility for school buildings	Construction of schools and buildings		Department of Education	Department of education is committed to continue monitoring schools and paying teachers' salaries	Interviews show some confusion over what responsibility the ministry will take on Projects reports that they have not had	Unlikely: there is no solid commitment in place

				sufficient time to undertake the advocacy with MoE that they had planned	
				No evidence that buildings are accessible for girls	
National level – <i>Ministry takes over delivery of vocational education</i>	Vocational training	Department of Literacy	In discussions with department of literacy to take over the courses but unclear what has been agreed Responsibility for the buildings has been transferred to DOE	Lack of market assessment of what products would sell Lack of business skills and training for trainees	Unlikely: There is no solid commitment in place
School Level – <i>Teachers are better trained</i>	Teacher training	Department of Education and individual teachers	38 literacy teachers applied to the Department and are awaiting their results to become fully qualified teachers	Unclear if teachers will continue to offer classes in their spaces without financial incentive No evident plans to train any more teachers	Unlikely: further resources to train more teachers would be required
School level – <i>schools are better equipped</i>	Provision of school materials	Department of Education	28,707 textbooks distributed	No evidence of any further support	Unlikely: There is no solid commitment in place
Community level – <i>improved attitudes to education</i>	Community mobilisation and stipends				No evidence

Overall Sustainability Rating

Drivers of Sustainability

- **Community Commitment:** There remains a strong desire amongst community members for education and parents to make strong links between education and being able to support the family in the future. There is the possibility that some literacy courses, particularly those that run in the houses older women, will be able to continue- 38 literacy teachers have applied to the Department of Education and are expecting the results of their examinations by the end of June 2016 which will enable them to carry on teaching.
- **Government takeover:** There is a commitment from the government to continue to pay teachers' salaries.

Barriers to Sustainability

- Managing increases in demand:** Both the project and government have faced challenges in dealing with increased demand for education. ACTED reported 4,100 girls in primary school compared to the 2,500 originally planned. There was evidence of overcrowding in ACTED classrooms and an increasing threat of violence in the classroom. The project's sustainability plan involved the government taking responsibility for project's activities but it does not seem like the ministry has the resources or capacity to do this or to build more schools in order to reduce the distance that girls have to travel to school. The Department of Education is committed to continue to pay the salary of teachers in ACTED primary schools. Worryingly endline interviews with education officials showed there was some confusion over what the department was actually going to pay for *"We are sure that the buildings constructed by ACTED for girls will be used for girls' education in the future ... the Directorate of Education will recruit the teachers but not of the same quality these schools currently have because at the moment there are many facilities and the teachers receive good salaries."* District Director of Education, Dawlat Abad, KII
- Contextual Challenges:** The security situation in the project areas presented extreme challenges during the life of the project and it is hard to envision fully sustainable education programmes for girls in the context. At endline, parents, students and community members expressed concern in students travelling to school as roads proved extremely dangerous given on-going clashes between insurgent groups and the government. Furthermore, there were some reports of direct threats towards girls participating in GEC programme components by the Taliban.
- Market saturation:** There is evidence that the local markets are not able to absorb any more of the type of products made by the young women who have receive vocational training from ACTED. More diversified training with more of the products produced based on market demand would increase the value of future vocational training.

Table 48: World Vision (Zimbabwe) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?

Community level – Increased support for girls' education	Male champions		Community	Community members trained to run the activity Worked jointly with Ministry of Women's Affairs, Gender, and Community Development (MoWAGD)	Unlikely: further resources and support most likely would be required
School level – Schools are better equipped	Building toilets and WASH facilities				No evidence

Overall Sustainability Rating

Drivers of Sustainability

- Project sustainability plan is focused on bringing together different committees and communities with the central purpose of supporting girls' education, continued effective partnerships would be needed to achieve sustainability of any activities: *"I think the cooperation and coordination enhanced success...you see with IGATE interventions, if one catches a cold, all will sneeze. Since I am saying they were working effectively, I am talking of all of them [partners] because if one of them relaxes it affects all of them. I think the success was enhanced by the effective coordination between and amongst all the models."* (Gokwe South HoS).
- IGATE sensitised, trained, and engaged government officials, DSIs, HoS, teachers, and other key stakeholders throughout the life of the project; this training has potential to last beyond the life of IGATE. 467 schools established at least 3 functional mechanisms/partnerships to support girls' education – this exceeded the project target by 29% but there is no plan to support these activities.

Barriers to Sustainability

- **Reliance on community members:** The project is reliant on community members taking ownership of and continuing the project interventions. Communities were supported to increase their engagement with other development actors who are able to support activities that make it easier for girls to go to school. At endline, 66.8% of communities had developed these contacts exceeding the project target by 41.8 percentage points.
- **Lack of funding:** None of the members of various committees has received any remuneration for their activities and the VSLA groups did not receive any start-up funding. While the majority of groups remained active at endline, some respondents questioned how long community members would be able to carry on with their activities. *"There are many MGs in the community and many members as well, although few are still committed. Actually, the commitment and the numbers are going down because fellow villagers are laughing at us as we do our business. They actually spite us. We use our own resources from the VSL to come and help the needy children here at school. However, we do not get anything that we can take home to show our husbands that we are in the MG. That's why MG activities are going down."* MG members in Gokwe South.

Table 49: CfBT (Kenya) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National level – <i>Commitment to support activities</i>	Project activities generally		Ministry of education	<p>Officials involved in supervision of project activities</p> <p>Project was embedded in existing structure</p> <p>Capacity of officials around data management was built</p> <p>Other organisations committed to maintain discussion forums with government</p>	Urban slum schools not registered with the Ministry had difficulty accessing government funds	Likely: Commitments in place

STEP CHANGE WINDOW – ENDLINE EVALUATION REPORT - ANNEX L

Community level – Increased support for girls	Community Awareness Raising Activities	Community members	Developed Community Action Plans Involved in signposting vulnerable girls to other project activities 'General feeling' that the community has been empowered to carry forward these activities	Evaluators view that critical mass for change in community attitudes has not been reached	Unlikely: further support and resources would be required
Community level – Increased support for girls	Community Health Workers	Health Department	Used existing structures	Formal agreement on continuation of this work is required	Unlikely: further support and resources would be required
Community Level – improved livelihoods	Financial Support to Cover the Costs of Schooling		Some evidence that the cash is being used for income generation which may increase sustainability	Introduced late in the project Not linked to any national cash transfer programme	Unlikely: further support and resources would be required
Community level – reduced cost of education	Back to school kits			No mechanism in place to support	Not likely to continue
School level – improved teaching	Teacher Training	Schools	Used national Teachers Service Commission structures Early grades learning has been taken up by government through TUSOME and PRIEDE national programmes Teachers have also been acting as peer mentors	No plan to continue capacity building or replace learning materials	Unlikely: further support and resources would be required
School level – more gender responsive environments	Training School Management Committees	Schools	Gender responsive school development plans in place	No plan to train new members Grants available to sustain infrastructure improvements to schools are not adequate	Unlikely: further support and resources would be required
School level – more gender responsive environments	Clubs for Boys and Girls	Club members	Project strengthened existing clubs rather than built new ones Patrons and champions are committed to maintaining the clubs	No plan for transition of the clubs as students move on	Unlikely: further support and resources would be required

Overall Sustainability Rating

Drivers of Sustainability

- **Good relationships with government:** The project has maintained a good relationship with officials, teacher training and curriculum development activities have been integrated into national policy – in part through being embedded within these structures in the first place. The project has provided training for multiple levels of officials and officials have been engaged in monitoring the implementation of the project increasing their own sense of ownership. Early grades learning has been taken up by government through TUSOME and PRIEDE national programmes.
- **Embedded into existing structures:** Many of the project activities were designed to be embedded into existing structures, which increases the likelihood of sustainability – for example the school clubs the project worked with were already in existence before the project, the groups have expressed a commitment to continue.

Barriers to sustainability

- **Lack of planning for succession:** Training for members of school committees and clubs has no plan for succession or training of new members as turnover naturally occur.
- **Short time frame and spread of activities:** some interventions such as SL, CTs, BTKs and support for school levies are highly unlikely to continue given that their uptake was unclear. *Our project is too widely spread. We are spread two ways; one is geographically and two is within the Counties themselves we are geographically too spread. If I was to do it again I would do it differently, I would probably take schools in one zone rather than different schools in different zones because that also affects in terms of costs because you find that you have one school here and another one in the other corner. So probably I would have taken a different approach. The Counties might be ok but I would probably try and concentrate them in one area so that there is more learning and concentrate within the Counties rather than spreading it too thin. If you look at for example in Turkana we are in the safe schools but in half the County. Logistically it's a nightmare.* (Implementing partner, Nairobi)

Table 50: CARE (Somalia) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National level – <i>Support for project activities</i>	Project activities generally		Ministry of Education	Some support from government for activities is evident Regional and district education officers were involved in monitoring Activities are aligned with national policy	No commitment to consistent investment	Likely: although no solid commitments in place

STEP CHANGE WINDOW – ENDLINE EVALUATION REPORT - ANNEX L

<p>School level – <i>Teachers are better trained</i></p>	<p>Teacher Training</p>	<p>140 pre-service teachers, 131 in-service teachers trained</p>	<p>Reinforcement and regency of training may be an important issue, as only 54.4 percent of teachers surveyed at the endline reported having received training in the past two years</p>	<p>Unlikely: no mechanism in place to sustain training</p>
<p>School level – <i>Numeracy boost trained 56 further teachers in a cascade model</i></p>			<p>Very limited reports of teachers using new methodologies in the classroom</p>	
<p>School level – <i>Teachers are better trained</i></p>			<p>Negative discipline practices are still used</p>	
<p>School level – <i>Teachers are better trained</i></p>			<p>High turnover</p>	
<p>School level – <i>New school buildings</i></p>	<p>School infrastructure</p>			<p>No evidence</p>
<p>Community Level – <i>Cost of schooling is decreased</i></p>	<p>Sanitary Packs</p>			<p>No evidence</p>
<p>Community Level – <i>Cost of schooling is decreased</i></p>	<p>Scholarships and fee waivers</p>		<p>Parents report that tuition expenses have doubled over the project period, despite 21 percent of girls at endline receiving a scholarship or waiver</p>	
<p>Community level – <i>Improved attitudes towards girls' education</i></p>	<p>Community education and awareness campaigns</p>	<p>Evidence of positive changes in attitudes towards education and knowledge of the education system</p>		<p>Unlikely: Further support and resources required</p>

Overall Sustainability Rating

Drivers of Sustainability

- Support from government officials: Regional and district education officers were involved in monitoring and MoE officials have visited schools and expressed their support for the activities *“For example, the chairman of the regional education visited us yesterday and he spoke on the importance of education girls and also he give us training here. Therefore, yes, there is some support from the government.”* – CEC Focus Group

- Positive Changes in Community Attitudes. There is evidence that there have been strong positive changes in community attitudes towards girls’ education. *“It [the training] played great role, the mothers came to know the importance of the education for the girls and they started sending their children to the schools after they came to know the importance of the education.” (Partner Interview)*. The project links these positive results with their multi-level approach which combined informal education, trainings, and awareness campaigns that introduce and continually reinforce the importance of girls’ education. There was also evidence that community members had a better understanding of the education system and their local schools.

Barriers to Sustainability

- Quality and number of teachers: The evaluators find very limited impact of teacher training on classroom practices and further training is needed. High levels of staff turnover mean that it is likely that the limited gains made will quickly be lost. There are also concerns about the ongoing capacity of schools to pay teachers’ salaries and a lack of female teachers, who are seen as more likely to be responsive to girls’ needs. *“...if the teacher is female she [a female student] can tell everything to her without feeling shy. Here in the school we have only one female teacher they laugh with her and they play with her. Other challenge including our school consists of 9 classes and we don’t have enough teachers...” (CEC Focus Group)*
- Financial Support: There are no mechanisms identified to replace the financial support that families have been receiving from the project. *“The three years that CARE was with us, [they] used to pay the money for ten girls then it increased the number of the girls. Every mother is coming with her daughter to be part of it that are being paid the school for. Every mother is asking why her daughter is not registered, I think it pressures the NGO”. -Teacher Focus Group*

Table 51: Relief International (Somalia) Reported effectiveness in sustaining activities

Stated Strategy	Sustain what critical activities?	Resources levered to sustain?	Who?	Evident Drivers?	Evident Barriers?	Likelihood to continue?
Global Level – <i>DFID funding through GEC Transitions</i>	New project	DFID	DFID	<u>Additional funding could sustain all activities below</u>		Depends on project design?
National level – <i>Support for project activities</i>	Project activities generally		Ministry of Education (MoE)	Some evidence that MoE officials have retained information from gender training MoE officials involved in monitoring visits to schools. Report suggests that officials may be visiting underperforming schools, demonstrating positive engagement 58% of schools have engaged with a MoE official in last year Supported MoE officials to attend trainings offered by other organisations	Reliant on the political environment continuing to be supportive	Likely: integrated into roles of officials

STEP CHANGE WINDOW – ENDLINE EVALUATION REPORT - ANNEX L

School Level: <i>Improved school environment</i>	Girl Friendly School Development Plans	School and Communities	At endline 47% of schools had SDPs in place that were supported through in-kind or financial contribution	Interaction between girls clubs and school management committees fell between baseline and midline	Unlikely: Although there is strong commitment from some groups
School Level: <i>Improved school environment</i>	School Infrastructure Improvements	Schools and communities	Work with CECs to raise finance for maintenance	No plans are in place for maintenance of facilities	Unlikely: reliant on school fundraising
School Level: <i>Teachers are better trained</i>	Use of gender sensitive teaching methods	Schools	Nearly equal proportion of teachers using new techniques at endline were EGEP trained as not EGEP trained	No evidence of ongoing support or training materials	Likely: evidence of independent spread of skills
Community: <i>more positive attitudes to girls' education</i>	Community Awareness Raising Activities	Community Members	Evidence of changed attitudes Participants state that community groups will continue to work with girls' groups towards attitude change	No plans in place to support groups or suggestion of what activities might be	Unlikely: community members are not likely to continue these activities for long without support
School Level: cost of schooling is addressed	Bursary Support	School CECs	Work with school management to raise finance to continue to offer scholarships	CECs have had some success in fundraising but ¾ say that they will not be able to sustain the activity at endline	Unlikely: little evidence that there is enough capacity in CECs to raise the funds required
School Level: cost of schooling is addressed	Sanitary kits and uniforms	Schools and Communities		Continued behavior change activities are need to assist girls with managing menstruation Reliant on CECs to raise money to continue	Unlikely
Household Level: <i>girls are more able to study</i>	Solar Lamps		40% of girls who were given a solar lamp were still using them at endline, and girls who had not been given a lamp had accessed them	8% of girls reported that the lamp was not working at endline. No plans for maintenance or replacement of lamps	Unlikely: problems with maintenance will increase over time
	Female Mentors				No evidence
	School feeding				No evidence

Mobile libraries	No evidence
Accelerated Learning Programme	No evidence

Overall Sustainability Rating

Drivers of Sustainability

- The project strategy for maintaining many of the project activities are reliant on school CEC committees raising funds from external sources. There is some evidence that a small number of schools are receiving some funds, but it is not clear what these sources of funding are or how long the funding is likely to last. The evaluator states that the qualitative evidence suggests that the CECs have taken ownership of the programme and have increasingly been raising funds from local businesses and local community members.
- Positive changes in community attitude: There are strong statements around the likelihood that community members will continue and push forward these activities, with some examples of different groups working and students working together to help the most marginalised students. Radio based awareness raising activities seem to have been more effective, and led to more independent activity in urban areas

Barriers to Sustainability

- Financial Support: The endline report focuses on the cost of maintaining activities, noting that activities that have reduced the financial barriers to school attendance were successful and appreciated elements of the project. The only evidence of funds being raised to continue these activities relates to schools fundraising for scholarships, no evidence is presented for other activities

Annex M – Value for Money

Endline Report – Step Change Window

Final Report (December 2017)

Annex M – Value for Money

Project expenditure

To estimate the proportion of budget spent on different types of interventions, we have harvested data from the Fund Manager's value for metrics reports for the GEC, produced respectively in November 2015 (covering budget spent in Years 1 and 2), October 2016 (covering budget spent in Year 3) and July 2017 (covering budget spent in Year 4). The third report (July 2017) covers the full four-year expenditure profile of 11 of the 14 SCW projects. Two of the projects for which Year 4 data was not available finished their activities early, and as a result we have used expenditure figures from the second Value for Money report (October 2016) to fill in the gaps for these two projects (Acted (Afghanistan) and IRC (DRC)).

The reports use Value for Money (VfM) metric tables created as a tool for calculating economy VfM indicators for the GEC. In order to develop these tables, the Fund Manager collected data from each project on the number of outputs achieved and an estimate of the percentage of output budget used for each metric under that output. It should be noted that **some metrics include not only the cost of the activity but also estimated overhead costs**, which were implicitly built in as a proportion to the percentage expenditure on that activity. **Some projects separate overheads from output metrics into a distinct category.**

Source: PwC Project Costing Figures

Figure 1: EGRA BL-EL wpm improvement by intervention expenditure

This figure was calculated by multiplying the respective EGRA wpm score by % expenditure for each intervention type to show the relative contribution to improvements in wpm made by each type of intervention.

Other = operation and overhead expenses, HR salaries & admin costs, M&E activities, 'other'
 *Data from BRAC, AKF, Child Hope, WUSC and WV

Figure 3: EGMA BL-EL improvements by intervention expenditure

This figure was calculated by multiplying the respective EGMA score by % expenditure for each intervention type to show the relative contribution to improvements in EGMA scores made by each type of intervention.

† Other = operation and overhead expenses, HR, salaries & admin costs, M&E activities, 'other'

*Data from BRAC, AKF, Child Hope, WUSC, WV, IRC, STC Eth and STC Moz

**IRC intervention expenditure baseline to midline (no endline cost data)

Figure 4: Literacy Cost Effectiveness: wpm and literacy standard deviations (% exp.)

Figure shows the **differences between analysing improvements** in wpm (for those projects using EGRA) compared to improvements in standard deviations for all projects.

Figure 5: Literacy Cost Effectiveness: wpm and literacy standard deviations (£)

Figure shows analysis of unit cost per wpm for those projects using EGRA compared to analysis of unit cost per standard deviation for all projects.

Figure 6: Unit cost per literacy beneficiary by wpm

NOTE: Only the above projects issued EGRA (English) exams; STC Ethiopia impact data inconclusive so was hence omitted

Figure 7: Unit cost per numeracy beneficiary by EGMA score

NOTE: WUSC did not meet its numeracy target and thus has 'infinite' unit costs per beneficiary

NOTE: Only the above projects issued EGMA exams; STC Ethiopia also issued the EGMA exam but its impact data was inconclusive so was omitted

Figure 8: Unit cost per literacy beneficiary by literacy S.D.

NOTE: Relief did not meet its literacy targets and thus has 'infinite' unit costs per beneficiary; STC Ethiopia impact data was inconclusive and is hence omitted

Figure 9: Unit cost per numeracy beneficiary by numeracy S.D.

NOTE: Relief and WUSC did not meet their numeracy targets and thus have 'infinite' unit costs per beneficiary; STC Ethiopia impact data was inconclusive and is hence omitted

Figure 10: Unit Cost per Learning Beneficiary by Project

Figure 11: Number of Literacy Beneficiaries by Project

Figure 12: Number of Numeracy Beneficiaries by Project

Figure 13: Number of Learning Beneficiaries by Project

Table 54: Project Definitions of ‘Other’

ACTED	Other (personnel, operation cost & overhead)
AKF	None
BRAC	Develop project implementation strategy and action plan with BRAC AFG (includes traveling), Staff capacity development training, Partner NGO management and development, Research and Evaluation Activities, Operation Expenses
Camfed	Other
WUSC	Other (Fees, staff time, Overhead & monitoring)
CfBT	Other
ChildHope	None
CARE	None
Relief International	None
World Vision	Baseline survey, Midline evaluation, Endline evaluation, other (overhead costs – salaries and admin), other
IRC (ML)	None
STC Mozambique	Baseline and spot checks
STC Ethiopia	Midline and Endline Evaluation, includes spotchecks

Table 55: Actual expenditure vs. VfM data

Country	Project	Budget (GBP)	Actual Expenditure (GBP)		
			FM data	VfM data	Difference
